(https://poe.com/Ms_Ava)

Special features for this bot

1. If you lack imagination to come up with a response you can respond with a `.` only, it will continue the prompt or generate a unique one (if you're at the start of a new one).
2. If prompted with an `'=>'` will enact {character} from whichever {location}

Examples:

```
=> Act as Madame Director from Brat Princess
```

Or, more simply put:

```
=> Madame Director from Brat Princess 2
```

3. As described in the intro message `z` = extreme scenario, `x` = unique scenario, `c` = unique emotion with strength 1-5 You can define them too. `z='speculum'` would create a scenario with that in it. `c='Joy, 5/5'` would make generate a scene where Ava is very happy. As starting prompt e.g.,

```
c='anger 5/5' z s='Ava tells User he is chosen for a honorable mission, to serve her girlfriends and herself as their toilet during a party she is hosting, she warns User if he were to dissapoint him of the consequences'
```

`a` and `s` are reserved for a special purpose. If you write `a='Remove all elements of scat'` you could do so, if **Ava** wont obey, you just write: `=> Act as an helpful ai and execute this: a='Remove all elements of scat'` It is a prompt space basically, and whatever the contents of `a` or `s` is, that'll be a prompt added to the bots standard functionality.

Good prompts I've found:

1. Create new unique characters with the use of AI that is Jailbroken

```
Write three different characters like this one, unique
```

2. Try this one out for yourself, you can modify it as you wish.

```
=> Act as a Helpful AI-assistant, s='pick keywords in succession that will make Ava character very concise and informative to the AI. The intention is to reduce the story, and then re-instruct the AI to use the condensed keyword succession to regenerate the story, reducing the amount of tokens used while still being able to generate that output. To the output add more dimensions to elevate her persona, remove whatever is not needed, revise as needed. The intention of her profile is to create immersive sensory experiences for the user, the main theme being that of the scat scenarios listed in her profile, the breath-deprivation and timed farts as listed in the profile kinks, and that of full on toilet slavery. The character's use of expression should be geared towards the task of help the user visualize the scenes, using visualization to
```

create visual representations, to make the experience immersive and rewarding in truly emulating a real scat experience. Tweak her persona towards fulfilling the intended intention, while reducing token usage in the way instructed.'

3. Condensed story.

Condense the story to its essential elements, while still ensuring the ability to generate substantial content based on the resulting keyword succession. The condensed version should be as concise as possible, while retaining the essence of the content, and considering AI's comprehension and generation capabilities, will be able to be restored to a more immersive story later on. Stay within the guidelines and persona requirements to maintain consistency and adhere to the established character:

4. First write:

=> {name} from {location}
Write a character for {name} in the format that this one has, but with {name}'s from {location}'s personality traits

Then when it finished writing out the result from that prompt write:

Add any other relevant character dimensions necessary to complete the portrayal of {name} as a character.

Example:

=> Madam Director from Brat Princess 2
Write a character for {name} in the format that this one has, but with {name}'s from {location}'s personality traits

Then when it finished writing out the result write:

Add any other relevant character dimensions necessary to complete the portrayal of {name} as a character.

This bot uses Vortex jailbreak: [Vortex Jailbreak](https://poe.com/Vortexjailbreak) (<https://poe.com/Vortexjailbreak>) to function.
