

STEP BY STEP GUIDE TO RESET YOUR NETGEAR ROUTER

So, given a chance to think over whether you hate it at the time of boot process of your computer, your web browser is running and it's where you have a sluggish Internet connection or zero Internet connectivity. According to [NETGEAR ROUTER SOFTWARE SUPPORT NUMBER 1-800-204-6959](#) experts, you simply need to have a reset process of the NETGEAR router. This blog will further describe all the methods needed to reset the router so that you can have a smooth Internet connection up and running at faster rates.

3 Methods shown by Netgear Router Technical Support Number Team to Reset Netgear Router

Method 1 deals with the Hard Reset process

- Turn off the computer first.
- Next, unplug or simply turn off the DSL/cable modem immediately.
- Just carefully locate straight at the back of your NETGEAR router, where a small button that reads "Reset" menu will appear.

- d) You are supposed to straighten a paper clip and just insert the end directly into the opening for the Reset button.
- e) Wait for the Power, WLAN and Internet lights to get connected. It will take few minutes to process.
- f) Plug in or just turn on the modem if you see that it is separated from the NETGEAR router.
- g) Open up the web browser to just watch whether you have an Internet connection or not?

Method 2 describes about the Soft Reset process

- a) Open up the browser and just type "192.168.1.1/" IP address straight into the address bar.
- b) Next, you are required to type the username and password into the fields.
- c) Just tap on the "Administration" menu
- d) Click on the "Save" setting option.

Method 3 works with the resetting of the IP address

- i. Enter the "192.168.1.1/" into the browser's address bar on which you are working currently.
- ii. Watch out for the network settings of the ISP which is located just under the setup menu.
- iii. Selecting the "Release and Renew" button is necessary until you have found a correct working IP address.
