

Anytime you talk home safety you want to talk radon, which is what we will talk about here. Radon is the second leading cause of lung cancer in the US and it has no need to be in your house. If you have never evaluated your home you need to do so right away. You should understand if it is present in your house if individuals are getting sick from it. Easy as that.

, if you need to have other tests run such as radon testing or lead paint testing always make sure you ask up front if the home inspector is qualified to do these.. It will save you a lot of time, hassle and perhaps even money <http://www.place123.net/place/radon-1-nashville-usa>

if you can discover one individual to do everything you need.

## Realities About House Radon

This year Haiti was struck with the 7.0 and Chili's earthquake reached 8.8 in magnitude. In 2009, according to NY Times, Giampaolo Giuliani predicted Italy's earthquake based on high radon levels released [4] However, his claim was dismissed by most of the science neighborhood and officials. Three other earthquakes in California surfaced simply after high levels of reduce radon dropped puzzling and moving the thoughts of possible prediction.

## Radon Gas-- The Expense Of Conserving 20,000 Lives

If one is available, demand spaces on higher floors. Rooms on lower floorings, especially the ground flooring, are at Radon Facts of theft due to simpler access. Make sure to also request for quarters which do not have sliding doors. They are much simpler for burglars to access.

Among numerous ethnic groups, the occurrence of lung cancer is greatest among African Americans. Due to the fact that of a high cultural propensity among this group to take up the smoking habit, this is.

### Radon Risk If You've Never Smoked

| Radon Level | If 1,000 people who never smoked were exposed to this level over a lifetime*... | The risk of cancer from radon exposure compares to**... | WHAT TO DO:                                         |
|-------------|---------------------------------------------------------------------------------|---------------------------------------------------------|-----------------------------------------------------|
| 20 pCi/L    | About 36 people could get lung cancer                                           | 35 times the risk of drowning                           | Fix your home                                       |
| 10 pCi/L    | About 18 people could get lung cancer                                           | 20 times the risk of dying in a home fire               | Fix your home                                       |
| 8 pCi/L     | About 15 people could get lung cancer                                           | 4 times the risk of dying in a fall                     | Fix your home                                       |
| 4 pCi/L     | About 7 people could get lung cancer                                            | The risk of dying in a car crash                        | Fix your home                                       |
| 2 pCi/L     | About 4 person could get lung cancer                                            | The risk of dying from poison                           | Consider fixing between 2 and 4 pCi/L               |
| 1.3 pCi/L   | About 2 people could get lung cancer                                            | (Average indoor radon level)                            | (Reducing radon levels below 2 pCi/L is difficult.) |
| 0.4 pCi/L   |                                                                                 | (Average outdoor radon level)                           |                                                     |

Note: If you are a former smoker, your risk may be higher.

\* Lifetime risk of lung cancer deaths from EPA Assessment of Risks from Radon in Homes (EPA 402-R-03-003).

\*\* Comparison data calculated using the Centers for Disease Control and Prevention's 1999-2001 National Center for Injury Prevention and Control Reports.
