Inquire Reasonable Price of Gefitinat 250mg Composition of Gefitinib 250mg Tablets

What do you mean by Gefitinib?

Gefitinib is a prescription medicine used to treat people with non-small cell lung cancer (NSCLC) that has spread to other parts of the body and:

- ❖ that have certain types of abnormal epidermal growth factor receptor (EGFR) genes, and
- ❖ who have not had previous treatment for cancer

Your doctor will perform a test to make sure that Gefitinib is right for you.

How you have it

- Gefitinib is a tablet. Swallow it whole with a glass of water.
- If you have difficulty swallowing tablets, you can dissolve Gefitinib in a glass of still water. Don't use any other type of liquid. Drop the tablet into the water without crushing it. Stir it occasionally for up to 20 minutes until the tablet has broken up into very small particles. Drink it straight away. Fill the glass again with water and drink it to make sure you take the whole dose.

Packing: Pack of 30 tablets

Can Gefitinib Cause Problems?

Along with their useful effects, most medicines can cause unwanted side-effects although not everyone experiences them. The table below contains some of the most common ones associated with Gefitinib

Common Gefitinib Side-effects	What can I do if I experience this?
Diarrhoea	Drink plenty of water. If this continues or becomes severe, you should let your doctor know
Feeling or being sick	Stick to simple meals - avoid rich or spicy foods
Sore or dry mouth	Ask your doctor or pharmacist to recommend a suitable remedy
Problems with eyesight, cough, sudden problems with breathing, high temperature, infections	Speak with your doctor as soon as possible
Loss of weight, lack of appetite, nosebleeds and other bleeding, itchy skin rash, nail problems, hair loss	If any become troublesome, speak with your doctor
Changes to some blood tests	Your doctor will regularly check for these
Feeling tired or weak	Do not drive or use tools or machines unless you feel well enough

If you experience any other symptoms which you think may be due to the tablets, ask your doctor or pharmacist for advice.

Precautions:

- Enlighten your doctor about any other medications you are taking (including prescription, over-the-counter, vitamins, herbal remedies, etc.). Do not take aspirin, or products containing aspirin unless your doctor specifically permits this.

- Do not receive any kind of immunization or vaccination without your doctor's approval while taking Gefitinib.
- Inform your doctor if you are pregnant.
- Do not breast feed while taking this medication.

Self-Care Tips:

- Drink at least two to three quarts of fluid every 24 hours, unless you are instructed otherwise.
- This medication causes little nausea. But if you should experience nausea, take anti-nausea medications as prescribed by your doctor, and eat small frequent meals. Sucking on lozenges and chewing gum may also help.
- Avoid sun exposure. Wear SPF 15 (or higher) sunblock and protective clothing.
- In general, drinking alcoholic beverages should be kept to a minimum or avoided completely. You should discuss this with your doctor.
- Get plenty of rest.
- Maintain good nutrition.
- If you experience symptoms or side effects, be sure to discuss them with your doctor. They can prescribe medications and/or offer other suggestions that are effective in managing such problems.
