

Murdle: Volume 2 Case 101 (Possible Solution?)

Consists of 380 letters and 19 unique pairs.

Process is not the same as Murdle: Volume 1.

Things that I tried:

- Detective Code
- Next Letter Code
- Exhibit B in Murdle: Volume 2.
- Exhibit C in Murdle: Volume 2. (Can't be used.)

Possible solutions:

- Swapping letters. (Not possible, too many repetitive letters.)
- Letters matching to each suspect. (Possibility is there, but it's hard to say if the letters have to be separate, together or backwards.)
- Combinations (Not tried. Thinking of doing second option with combining it with Exhibit B: Irratino's Numerology. See where it leads me.

My notes:

A question mark '?' means that I'm not too sure where the surname for each suspect goes. Example: Aubergine appears in RG, UG, RB, and RI. Again, I don't know where this leads.

19 Unique Pairs:

RG, VI, OP, LC, MS, RC, EV, HW, IP, AS, RB, HC, UG, RI, IM, LB, OC, AT, and AM

RG: (When using Irratino's Numerology.)

Aubergine: (There's 3 possibilities as to what letters they could be connected. Although, it's hard to say if it's the first letter or last letter. It's also hard to say if it also uses the letters in the Numerological Association. Which would put 4 possibilities.)

This is with almost every name in Murdle: Volume 2. This is definitely a trial and error, especially when using either the Detective Code or Next Letter Code. The only way to know if we're going in the right direction is if it spells six particular words or more, which is "Logico", "Vice", "President", "Mauve", "TekTopia", and "MORIARTY".

That's about it.
