

## Advantages Of Mimosa Hostilis

Mimosa Hostilis Root Bark is a well known entheogen used for shamanic healing globally which comprises as much as 1%-2% DMT (Dimethyltryptamine). It's also known as Jurema, Vinho de Jurema, Jurema Preta or Black Jurema.

Mimosa Hostilis Root Bark is also the most popular natural pigment in the world now used for crafts and arts including tie dye.

Many people don't know about benefits and the astounding natural healing properties of Mimosa Hostilis Stalk Bark although the uses of the Mimosa Hostilis Root Bark are really well known.

Mimosa Hostilis (also referred to as Mimosa Tenuiflora) is a perennial evergreen tree or shrub which grows wild in Northeastern Brazil where it's known as Jurema or Jurema Preta as well as in Southern Mexico where it's known as Tepezcohuite.

The stem bark of the Tepezcohuite tree was used by local native tribes for centuries as a miracle remedy for everything from infections to inflammation, burns and even flu, bronchitis along with the common cold.

Tepezcohuite bark that is pulverized has a rather high concentration of tannins that makes it among the most famous natural blood coagulants. The tannins act as an astringent which causes your skin to stop bleeding and form new tissue as well as being a natural antiinflammatory which facilitates healing.

The miraculous benefits of powdered tepezcohuite skin bark are now being examined at university and private laboratories all around the globe because of its healing effects on burns, scars and other chronic skin conditions.

There is evidence the ability to both protect and stimulate collagen of tepezcohuite is the key to its exceptional capability to cure the most severe burns in an issue of weeks making essentially no visible scarring at the conclusion of the natural healing process. Tepezcohuite functions as an all in a single remedy since it truly is not as weak as any natural antibiotic that is known to kill infection while also acting as a natural anti-inflammatory.

Now powdered tepezcohuite is the primary ingredient in numerous wellness products worldwide including skin creams and shampoos, soaps, lotions for acne, herpes, eczema and psoriasis. Get far more details about [wild dagga](#)

Tepezcohuite is a popular herbal remedy in Mexico and Brazil. It is commonly drank as a tea to cure aches, pains, respiratory illnesses and even to help out with eliminating withdrawal symptoms during detoxification from cigarettes, booze and hard drugs for example cocaine and heroin.

In Brazil, Jurema is a source of fodder and forage for cows, goats, sheep and other animals which eat the plants leaves and pods which are rich in protein and nutrients which could sustain humans as well should they become hungry and lost in the wild.
