

	Death Toll	Injuries & Adverse Events	Serious Injuries
EU	34,337	3,120,439	1,470,537
UK	2,017	1,458,428	
US	11,505	783,281	138,247

From Covid-19 Vaccines

The UK's MHRA admits that injuries are highly underreported, i.e., only 1-10% are reported. Sources: yellowcard.mhra.gov.uk, EudraVigilance, openvaers.com. Data to Jan 12th, 2022.

Vaccine Death Single Dose Cause & Effect

This graph shows how soon deaths occur after vaccination, for Jan-Nov '21 in the US. **The majority of deaths occur within days or weeks.** If the vaccine was not causing death, the deaths would be spread out evenly. With cause and effect, the closer the effect follows the cause, the stronger the evidence.

This is **public, official data** from US VAERS (Vaccine Adverse Event Reporting System).

← **EFFECT (Death)**
← **CAUSE (Vaccination)**

Graph shows those who died from first dose only. Total 3010 deaths. Figures are estimated to be highly underreported.

Toxic Batches

Covid-19 vaccine batches show **huge variation in toxicity**. The vast majority of batches have only a few reports per million. But the worst batches have 2 serious injuries per 1000 doses, or **1 in 500 chance of an injury**. This is very strong evidence of fraud, in which case, the Pharma companies are liable.

For mRNA vaccines, this may be caused by the Lipid Nanoparticles (LNP), floating to the top of the solution in the vat, before being poured off. Lipid means fat; fat floats on water.

Each batch contains ~140L of solution, and each vial is 0.45ml, with 5 or 6 doses per vial. The average no. of doses per batch for Pfizer is 1.6 million.

The Advocate Effect: getting a placebo or low dose of a vaccine, then telling others you had no problems.

The Bystander Effect: knowing there are vaccine injured people around you, and doing nothing.
