Robot Building for Beginners, Third Edition (Technology in Action)

Robot Building for Beginners, Third Edition (Technology in Action)

Book Synopsis

I wrote this book because I love building robots. I want you to love building robots, too. It took me a while to learn about many of the tools and parts in amateur robotics. Perhaps by writing about my experiences, I can give you a head start.--David Cook

Robot Building for Beginners, Third Edition provides basic, practical knowledge on getting started in amateur robotics. There is a mix of content: from serious reference tables and descriptions to personal stories and humorous bits. The robot described and built in this book is battery powered and about the size of a lunch box. It is autonomous that is, it isn't remote controlled. The book is broken up into small chapters, suitable for bedtime (or bathroom) reading. The characteristics and purposes of each major component (resistor,

From Counterculture to Cyberculture: Stewart Brand, the Whole Earth Network, and the Rise of Digital Utopianism

From Counterculture to Cyberculture: Stewart Brand, the Whole Earth Network, and the Rise of Digital Utopianism

Book Synopsis

In the early 1960s, computers haunted the American popular imagination. Bleak tools of the cold war, they embodied the rigid organization and mechanical conformity that made the military-industrial complex possible. But by the 1990s—and the dawn of the Internet—computers started to represent a very different kind of world: a collaborative and digital utopia modeled on the communal ideals of the hippies who so vehemently rebelled against the cold war establishment in the first place. *From Counterculture to Cyberculture* is the first book to explore this extraordinary and ironic transformation. Fred Turner here traces the previously untold story of a highly influential group of San Francisco Bay-area entrepreneurs: Stewart Brand and the Whole Earth network. Between 1968 and 1998, via such

Seeking SRE: Conversations About Running Production Systems at Scale

Seeking SRE: Conversations About Running Production Systems at Scale

Book Synopsis

Digital Capitalism: Networking the Global Market System

Digital Capitalism: Networking the Global Market System

Book Synopsis

The networks that comprise cyberspace were originally created at the behest of government agencies, military contractors, and allied educational institutions. Over the past generation or so, however, a growing number of these networks began to serve primarily corporate users. Under the sway of an expansionary market logic, the Internet began a political-economic transition toward what Dan Schiller calls “digital capitalism.” Schiller traces these metamorphoses through three critically important and interlinked realms. Parts I and II deal with the overwhelmingly “neoliberal” or market-driven policies that influence and govern the telecommunications system and their empowerment of transnational corporations while at the same time exacerbating existing social inequalities. Part III shows

The Inmates Are Running the Asylum: Why High Tech Products Drive Us Crazy and How to Restore the Sanity

The Inmates Are Running the Asylum: Why High Tech Products Drive Us Crazy and How to Restore the Sanity

Book Synopsis

In this book about the darker side of technology's impact on our lives, Alan Cooper begins by explaining that unlike other devices throughout history, computers have a meta function: an unwanted, unforeseen option that users may accidentally invoke with what they thought was a normal keystroke. Cooper details many of these meta functions to explain his central thesis: programmers need to seriously re-evaluate the many user-hostile concepts deeply embedded within the software development process. Rather than provide users with a straightforward set of options, programmers often pile on the bells and whistles and ignore or de-prioritise lingering bugs. For the average user, increased functionality is a great burden, adding to the recurrent chorus that plays: computers are hard, mysterious,
