## Securing NFTS with ledger

The Ledger Nano S Plus is a hardware wallet designed to securely store and manage digital assets, including cryptocurrencies, NFTs, and tokens. It features a CC EAL5+ certified secure chip that protects against hacking attempts, as well as a larger screen and more memory than the original Ledger Nano S. The device can manage over 5,500 digital assets, with up to 100 apps installed simultaneously. Users can also manage their NFTs safely with Ledger Live and enjoy a smoother user experience with the larger screen. The Ledger Nano S Plus is priced at £69.00, including VAT, and is one of the most popular hardware wallets on the market. It is comparable to the Ledger Nano X, which has additional features such as Bluetooth connectivity and a higher price point at £136.00. Overall, the Ledger Nano S Plus is a great option for anyone looking to securely store and manage their digital assets. Link to Purchase-----

## Transitioning from an exchange to a Ledger device

Thank you for sharing the information about the Ledger Live app and Ledger hardware wallets. It seems like a comprehensive platform for managing and securing various cryptocurrencies and NFTs. Is there anything specific you would like me to help you with regarding this topic? Link to ----->
