CAVEAT: This summary is based on information from adverse reaction reports submitted by health professionals and laypersons either directly to Health Canada or via market authorization holders. Each report represents the suspicion, opinion or observation of the individual reporter. The Canada Vigilance Program is a spontaneous reporting system that is suitable to detect signals of potential health product safety issues during the post-market period. The data has been collected primarily by a spontaneous surveillance system in which adverse reactions to health products are reported on a voluntary basis. Under reporting of adverse reactions is seen with both voluntary and mandatory spontaneous surveillance systems. Accumulated case reports should not be used as a basis for determining the incidence of a reaction or estimating risk for a particular product as neither the total number of reactions occurring, nor the number of patients exposed to the health product is known. Because of the multiple factors that influence reporting, quantitative comparisons of health product safety cannot be made from the data. Some of these factors include the length of time a drug is marketed, the market share, size and sophistication of the sales force, publicity about an adverse reaction and regulatory actions. In some cases, the reported clinical data is incomplete and there is not certainty that these health products caused the reported reactions. A given reaction may be due to an underlying disease process or to another coincidental factor. This information is provided with the understanding that the data will be appropriately referenced and used in conjunction with this caveat statement.

Age: All

CAVEAT: This summary is based on information from adverse reaction reports submitted by health professionals and laypersons either directly to Health Canada or via market authorization holders. Each report represents the suspicion, opinion or observation of the individual reporter. The Canada Vigilance Program is a spontaneous reporting system that is suitable to detect signals of potential health product safety issues during the post-market period. The data has been collected primarily by a spontaneous surveillance system in which adverse reactions to health products are reported on a voluntary basis. Under reporting of adverse reactions is seen with both voluntary and mandatory spontaneous surveillance systems. Accumulated case reports should not be used as a basis for determining the incidence of a reaction or estimating risk for a particular product as neither the total number of reactions occurring, nor the number of patients exposed to the health product is known. Because of the multiple factors that influence reporting, quantitative comparisons of health product safety cannot be made from the data. Some of these factors include the length of time a drug is marketed, the market share, size and sophistication of the sales force, publicity about an adverse reaction and regulatory actions. In some cases, the reported clinical data is incomplete and there is not certainty that these health products caused the reported reactions. A given reaction may be due to an underlying disease process or to another coincidental factor. This information is provided with the understanding that the data will be appropriately referenced and used in conjunction with this caveat statement.

Product Description	Health Product Role	Dosage Form	Route of Administration	Dose	Frequency	Therapy Duration	Indication(s)
ASTRAZENECA COVID-19 VACCINE VIAL CONTAINS 10 DOSES OF 0.5ML	Suspect	SOLUTION INTRAMUSCULAR	Intramuscular				Immunisation
DULOXETINE HYDROCHLORIDE	Concomitant		Unknown				
FLOVENT HFA	Concomitant	METERED-DOSE (AEROSOL)	Unknown				
FLURAZEPAM HYDROCHLORIDE	Concomitant	Capsules	Unknown				
LEVOMEPROMAZINE MALEATE	Concomitant		Unknown				
LEVOTHYROXINE SODIUM	Concomitant	NOT SPECIFIED	Unknown				
MELATONIN	Concomitant	NOT SPECIFIED	Unknown				
NABILONE	Concomitant		Unknown				

Product Description	Health Product Role	Dosage Form	Route of Administration	Dose	Frequency	Therapy Duration	Indication(s)
ONDANSETRON HYDROCHLORIDE	Concomitant	Tablet	Unknown				
PMS RABEPRAZOLE EC	Concomitant	Tablet	Unknown				
PREGABALIN	Concomitant	Capsules	Unknown				
RANITIDINE HYDROCHLORIDE	Concomitant	Tablet	Unknown				
SALBUTAMOL	Concomitant	NOT SPECIFIED	Unknown				
SANDOZ DICLOFENAC	Concomitant	Suppository	Unknown				
TEVA FENTANYL	Concomitant	Transdermal patch	Unknown				
TRAZODONE	Concomitant	Tablets	Unknown				

Adverse Reaction Term Information

Adverse Reaction Term(s)	MedDRA Version	Reaction Duration
Headache	v.24.1	
Nausea	v.24.1	
Somnolence	v.24.1

Latest Received Date:	N/A
Total Number of Reports:	197 Report(s)

Brand Name/Active Ingredient: covid
Search Date Criteria: 2021-09-30 to 2021-12-30
Reaction Term(s): All/Tous
Serious report?: Both
Type of Report: All
Source of Report: All
Gender: All
Report Outcome: All
Age: All

CAVEAT: This summary is based on information from adverse reaction reports submitted by health professionals and laypersons either directly to Health Canada or via market authorization holders. Each report represents the suspicion, opinion or observation of the individual reporter. The Canada Vigilance Program is a spontaneous reporting system that is suitable to detect signals of potential health product safety issues during the post-market period. The data has been collected primarily by a spontaneous surveillance system in which adverse reactions to health products are reported on a voluntary basis. Under reporting of adverse reactions is seen with both voluntary and mandatory spontaneous surveillance systems. Accumulated case reports should not be used as a basis for determining the incidence of a reaction or estimating risk for a particular product as neither the total number of reactions occurring, nor the number of patients exposed to the health product is known. Because of the multiple factors that influence reporting, quantitative comparisons of health product safety cannot be made from the data. Some of these factors include the length of time a drug is marketed, the market share, size and sophistication of the sales force, publicity about an adverse reaction and regulatory actions. In some cases, the reported clinical data is incomplete and there is not certainty that these health products caused the reported reactions. A given reaction may be due to an underlying disease process or to another coincidental factor. This information is provided with the understanding that the data will be appropriately referenced and used in conjunction with this caveat statement.

TYLENOL ARTHRITIS PAIN 8H	Concomitant	TABLET (EXTENDED-RELEASE)					Arthritis
XANAX	Concomitant	Tablets					

Adverse Reaction Term Information

Adverse Reaction Term(s)	MedDRA Version	Reaction Duration
Agitation	v.24.1	
Arthralgia	v.24.1	
Back pain	v.24.1	
Blood cholesterol increased	v.24.1	
Blood pressure diastolic abnormal	v.24.1	
Blood pressure increased	v.24.1	
Blood pressure systolic abnormal	v.24.1	
Blood pressure systolic increased	v.24.1	
Bone disorder	v.24.1	
Cholelithiasis	v.24.1	
Chromaturia	v.24.1	
Diarrhoea	v.24.1	
Dizziness	v.24.1	
Electrocardiogram abnormal	v.24.1	
Fall	v.24.1	
Fungal infection	v.24.1	
Gastric disorder	v.24.1	
Haemorrhoids	v.24.1	
Headache	v.24.1	

Adverse Reaction Term(s)	MedDRA Version	Reaction Duration
Heart rate decreased	v.24.1	
Heart rate increased	v.24.1	
Hepatic steatosis	v.24.1	
Hyperhidrosis	v.24.1	
Hypotension	v.24.1	
Influenza	v.24.1	
Infusion related reaction	v.24.1	
Joint swelling	v.24.1	
Ligament sprain	v.24.1	
Malaise	v.24.1	
Mobility decreased	v.24.1	
Muscle strain	v.24.1	
Muscular weakness	v.24.1	
Nasal congestion	v.24.1	
Nasopharyngitis	v.24.1	
Osteoporosis	v.24.1	
Oxygen saturation decreased	v.24.1	
Pain	v.24.1	
Pain in extremity	v.24.1	
Peripheral swelling	v.24.1	
Poor dental condition	v.24.1	
Pruritus	v.24.1	
Rash	v.24.1	
Rheumatoid arthritis	v.24.1	
Rib fracture	v.24.1	
Therapeutic product effect decreased	v.24.1	
Tooth disorder	v.24.1	
Vessel puncture site bruise	v.24.1	
Weight decreased	v.24.1	
Weight increased	v.24.1
