# Download Minecraft Mods Minecraft Mods

Not Enough Items (NEI) is a sequel to Too Many Items (or Recipe Book). It was created in the same year as Craft Guide. Alexandria and other IRC members suggested that I merge Too Many Items (or Recipe Book) to eliminate their most significant flaws which was ironically, too many items or as in the case of the recipe book or recipe book, too many recipes. Too Many Items was great, but one thing it was lacking was an easy way to search and sort your items. JUST SAY YES If you had a mod such as Red Power coming along with 10000 items both TMI and Recipe Book were racking up the pages. Even if you don't want to use NEI for cheating in items, you will likely feel at ease with the Recipe feature of the mod.

How to install: Minecraft Forge is not required without it installed, if it's not installed, you won't be able look for mobs in mobspawner items. The procedure for installing NEI has been changed. (For it to be easier!) Install FML + OR Minecraft Forge + into the jar. Place the CodeChickenCore Jar file into the coremods folder. Place the NEI Jar files in the coremods directory. Any modules' zip files must be placed in the mods directory.
