

In fact, over the years, it has been shown that nerve cells and their stimulation are a reality at different stages of development in boys and girls. Thanks to this, it seeks to make learning a positive and pleasant experience, in which the teacher intends to follow active methodologies and promote learning environments from less challenging to more challenging, involving students in complex and creative experiences. **Visit Here :** [Flows Me](#)

On the other hand, emotions and curiosity play a very important role in this journey, as they lead a person, at any stage of their life, to seek knowledge and personal fulfillment, and thus achieve not only profound knowledge. It helps students to think and analyze, but it also allows them to form their critical thinking, strengthen their self-esteem, self-confidence and discover their emotions.

Therefore, it is of great importance that, from the beginning of the child's school life, each teacher becomes a brain stimulator specialist, as he can identify experiences and emotions with his students, thus achieving a balance that allows discovery, experimentation and a feeling learning in different areas.
