

1. Go to Salesforce login screen

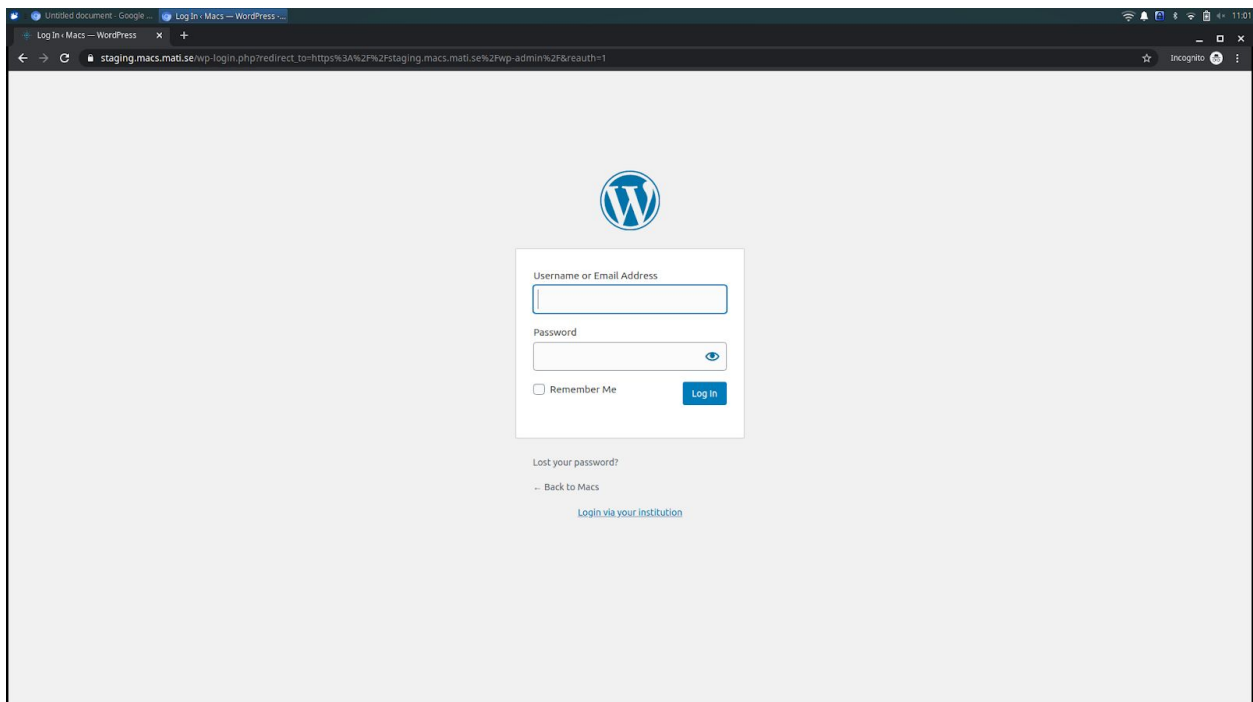

2. Click on SAML2 login button -> taken to Gluu login page

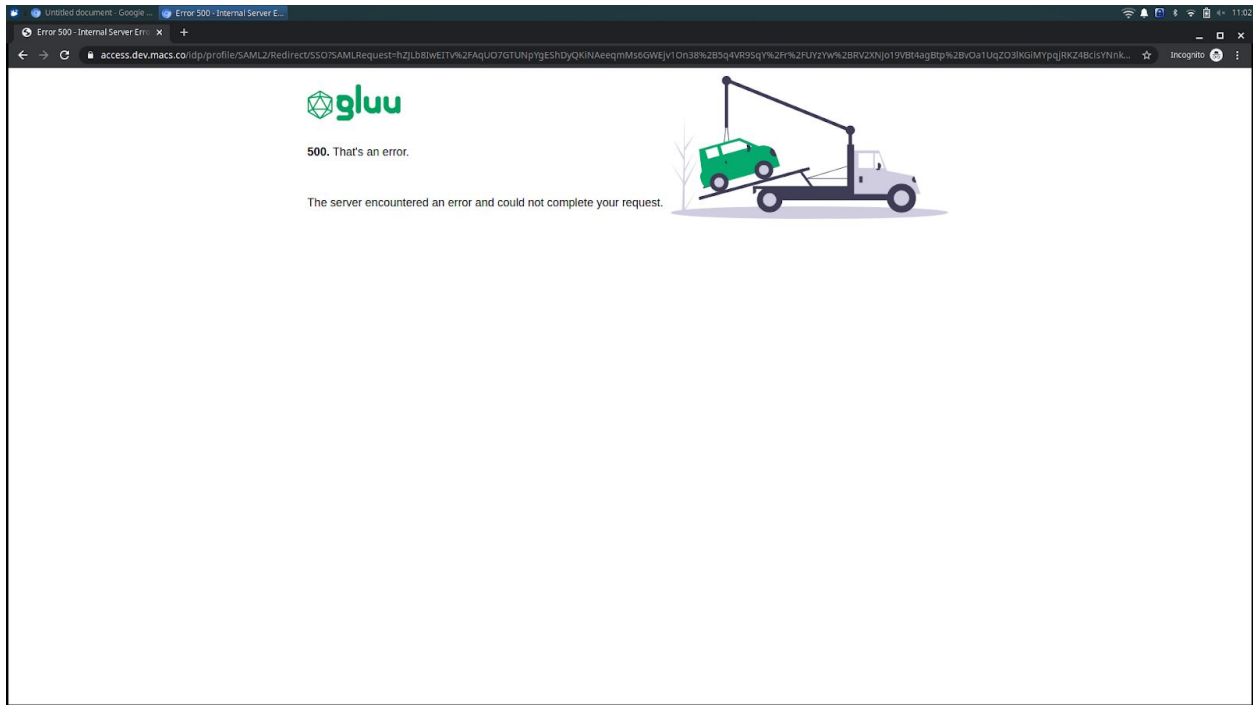

3. Log in and Remember me -> successfully logged into Salesforce

4. Type Wordpress URI in address bar in same browser -> taken to Wordpress login

5. Click on SAML2 link -> expected to be taken to Gluu

The opposite scenario provides the same results, so starting from Wordpress and trying to log into Salesforce causes the same issue.

Logging into each of the SPs individually (in incognito mode) works just fine.
