- Customer service and interpersonal skills
- Computer literate, including Excel, Word and PowerPoint

WORK HISTORY

CHARLESTON'S RESTAURANT

Head Server/Bartender | 3020 S Hulen, Fort Worth, TX 76109 | August 2013 - Current

Charleston's is a high volume restaurant with a large amount of regular and devoted clientele. Started here as a server and quickly worked my way up to a head server in a years time and then later a bartender. The responsibilities of the head server involve delegation of up to 19 servers and their duties, overseeing of the shift, and a larger section of patrons relative to a normal server. The shift leader is also responsible for the opening or the closing of the restaurant and the duties that entails.

Bartending consists of service to a plethora of regulars in high volume who are expectant of our attention to detail and concise timely servitude. Received beverage orders from servers and produced the necessary beverage to guests.

Bartending requires a vast knowledge of drink recipes that must be recalled accurately and instantaneously in a hectic fast paced environment to ensure guest satisfaction as well as in accordance with inventory and local liquor laws. A high volume of cash was transacted and maintained by the bartender.

Worked closely with management in provided a ground-floor assessment of the mood of the restaurant and how we can improve as a team to better serve the clientele. Assisted manager in staffing decisions, including promotional opportunities for employees.

PARKER HANNIFIN-STRATOFLEX DIVISION

Inventory Specialist | 220 S Roberts Cut Off Rd, Fort Worth, TX 76114 | January 2011 - August 2013

Parker Hannifin is a global leader in aerospace manufacturing. Parker Hannifin provides engine components to aerospace industry leaders such as Pratt and Whitney, General Electric, Honeywell, etc. My role in this company involved coordination with production lines to supply necessary parts for continuation of line production internally and externally as well as warehouse logistics involving inventory management.

Furthermore I was responsible for coordination with the sales team, private and government, in order to fulfill the sale of components. This often involved immediate response to facilitate shortages in factories further up the supply chain. These shortages involved coordination between multiple departments. Often times this job involved solving perplexing logistics problems that were highly satisfying when concluded.

I worked in accordance with management on many issues. These ranged from inventory to sales inquiries as well as interdepartmental issues such as allotment of our staffing needs.

EDUCATION

BACHELOR OF SCIENCE Geology/Biology

University of Texas at Arlington

| 2017

Received a degree in Geology, and a minor in Biology with coursework focused on hydrological and environmental issues. Relevant coursework includes: Oceanography and Limnology, Hydrology, Toxicology, Ecology, Earth Systems and Biology.

Oceanography and Limnology was a graduated level class focused on the physics of our oceans, atmosphere and freshwater environments. This was a calculus heavy class with field opportunities. For this course, I was awarded one of two A's that were allotted.

I am a member of Sigma Gamma Epsilon, an organization that awards scholarship and professionalism within the Earth Sciences.
