

Swollen Gum Around Just One Tooth

A major and common cause of swollen gums is periodontal disease. This chronic infection affects 50% of the adult population and after the age of 65, about 70% of the elderly will have gum disease! Other signs of periodontal disease may include bleeding gums, bad taste or odor, pain, teeth that move or are shifting or none of these. Untreated periodontal or gum disease will lead to bone loss and ultimately tooth loss.
