

## Continuous Duct Rod

### Application

A high quality glass fibre reinforced helically wound epoxy rod giving good adhesion properties for the outer polyethylene coating. This construction gives excellent bending elasticity which makes it ideal for short to long installations into ducts. It is an ideal and fast way of installing draw ropes and Winch ropes into ducts ready for Cable Pulling operations. All units are designed and built for easy handling. All rods come complete with guide tips.

Depending on the conditions of the building site these reels may be used standing vertically or horizontally. The guide ring allows a gentle pulling-in of the continuous duct rod. The reels are equipped with easy running, rubber tired wheels. The reels are hotdip galvanized and therefor protected against corrosion

### Features

- Glass fibre reinforces epoxy rod
- Length: 300m
- Thickness: 11mm
