

On the other hand, Rodriguez states that "one of the main shortcomings is that we could not provide them with tools and strategies so that they were the ones who put together their speech and we decided to give them a pattern of how they should feel and act in this new social project."

In this sense, experts agree that there is a promising future for feminism, which will spread to different areas of society, including education. For example, there have been changes to educational programs to address feminism and gender-based violence, so these initiatives are expected to continue to grow.

The consequences of marine pollution are alarming for biodiversity. According to a study by PLoS One, marine plastic pollution is around 2.4 million tonnes, a situation that has accelerated over the past three decades and will continue to grow. Visit Here : [The Tech Chart](#)

In this context, Loreto Contreras, a researcher in ecology and biodiversity at Andrés Bello University, says that there is currently a high degree of pollution on the coast due to nutrients, heavy metals, PAHs and microplastics.
