SOPFORPHDIN PHYSICS

Ive always thought of physics as the study of two completely separate fields – one which explained phenomena in everyday life, and one that explained phenomena that could not be fathomed in everyday life. As a child, I was fascinated by the former, which led me to study physics in college. During that time, I became interested in the latter, and became very interested in its implications on the environment and society. Luckily, my college offered an interdisciplinary degree, which allowed me to study Physics and Environmental Science. My goal is to become a researcher that worked on ways of containing radioactive waste generated by hospitals and industrial applications in a way that would reduce their impact on the environment as well as gradually convert them into inert material.

After completing my college degree, I worked for a few years at the Environmental Protection Agency, where I examined sites of radioactive leakage and measured the damage done. However, I still wanted to actively find ways to contain and control such occurrences. For this reason, I decided to return to school to obtain a PhD in Physics, which will enhance my knowledge base and equip me with the necessary research understanding to be able to conduct meaningful experiments and develop new methods of disposing of radioactive waste.

Faraday University is my first choice for graduate studies because of its reputation as a center of learning and social responsibility. I look forward to the service projects that students are required to conduct, as giving back to the community and environment is at the core of what I hope to focus my research on. Additionally, the close mentorship will enable me to learn techniques quickly and conduct relevant experiments with accuracy and speed.

Statement of Purpose for PhD in Finance Sample

SOP FOR PHD IN FINANCE

It has long been said that money makes the world go 'round, but there also needs to people to drive the money around on its course to keep the global economy running. During high school, I became fascinated by economics and the way trends in the marketplace worked. Combined with my strong interest in mathematics, I began making my own models of certain stock performances as a senior in high school. In college, I studied Finance with a minor in Mathematics, hoping to be able to unite the two to be able to create more advanced models for a great variety of goods, not just stocks. My goal is to become a financial analyst who develops customized powerful financial models for any business, and I believe that a PhD in Finance from Stonyfield University will provide me with the skills and knowledge to fulfill that goal.

Although my models that I developed in high school were able to guide my investment decisions, I quickly realized that the successes of my model were only marginally higher than if I had picked the stocks randomly. I was frustrated when I realized this, but it also demonstrated to me that I needed much more background training and a deeper understanding of both the theory and the mathematical concepts behind modeling complicated market performance. For this reason, I hope to enhance my understanding and skills with PhD training from Stonyfield University.

As a leader in global business studies, Stonyfield University is known for its graduate programs bringing together cutting edge technology with tried-and-true business practice. As someone who hopes to bring together computer modeling, mathematical calculations, and real-time market performance data, this will be an excellent opportunity for me to learn from experts in all fields, allowing me to make better models that are more user-friendly and accurate. Stonyfield University is the perfect place for me to enhance my skillset and forge invaluable networking connections.

Sample Statement of Purpose for Masters in Finance

Introduce your abilities, experience and interests to the admission committee in the best way. **Sample statement of purpose for masters in** to present how you can do **finance**

SOP FOR MASTERS IN FINANCE

At the end of a day, a business is a structure that enables the transactions that make money. This was a quote from my economics teacher in high school, and it has struck me to this day as the quintessential concept that drives all business growth and activities. My interest in finance started when I realized that investing was a good way to make money with money passively, and I have always hoped to continue to build on that concept. For this reason, I hope to complete a Master's program in Finance, which will give me the knowledge and the skills that I will need to manage investments and growth.

My interest in finance led me to apply for a Finance Internship at a local fund management company, allowing me glimpse firsthand how trading works. As an intern, I helped to not only closely monitor performance charts, but also gauge the movements in the market to help predict future changes. A great part of my internship involved client interaction, and I learned how to coordinate investment plans to match a client's short-term and long-term goals. This experience was invaluable to me in showing me how the industry of finance worked, as well as giving me the skills I would need to continue in a role in the Finance sector.

This Master's degree in Finance will open doors to new job opportunities for me, where I will be facing new challenges. The education I receive during this finance program will prepare me to meet these challenges through a mix of lectures and hands-on projects which will develop not only my financial skills, but also my leadership knowledge as well. I look forward to working with like-minded peers on collaborative elements that will further enhance my experience in the program. This Master's program in Finance will allow me to hone my business acumen with an understanding of client needs essential in the career of an excellent financial professional.

Economics PhD Statement of Purpose Sample

Professional economics PhD statement of purpose sample was created by our experts to show you that creating your own one could be not a complicated task!

SOP FOR PHD IN ECONOMICS

The study of how economies work has always been a fascinating blend of different fields, requiring a combination of knowledge, critical thinking, and fast reflexes to really succeed in. I was first interested in the field as a high school student, where our class was challenged to develop a pertinent business model to fulfill a need in the market. The countless hours of research and brainstorming that followed that project sparked in me an interest in continuing to explore the field. For this reason, I am choosing to return to school and pursue a PhD in Economics from Fairbrook University.

I first learned about Fairbrook University from a coworker of mine when we were both financial analysts at a medium sized consulting firm. I was very impressed with his ability to discern issues with current models and his knowledge of several computer languages, which he informed me was part of the Fairbrook curriculum. When I expressed my curiosity as to how the models could be improved, he jokingly suggested that it was above our pay grade and maybe I should return to school. What started out as a joke became an obsession for me, and after taking a few graduate courses at my local college, I know that I would like to continue my education at the graduate level.

A PhD in Economics will enable me to not only create and interpret models, but also conduct the relevant research needed to improve current models. Fairbrook University integrates a cutting edge computer science curriculum with its Economics PhD program, and I have seen firsthand that a strong understanding of computer models is critical to success in Economics in a technologically-driven world. I believe that the PhD program at Fairbrook University will equip me with the skills and understanding I need.

Statement of Purpose for PhD in Engineering Sample

Do not know how to make the successful statement of purpose for PhD in engineering? Look at this **statement of purpose for PhD in engineering sample** that was written by our professional service aimed to help you with this issue!

SOP FOR PHD IN ENGINEERING

Energy is what powers us and what enables entire countries to run – unfortunately, the methods of current consumption will lead to the inevitable depreciation of energy stores worldwide. Renewable energy, while promising, still has many hurdles to overcome, including political and economic controversies. During my master's studies, I focused on examining existing technologies and figuring out new methods for implementation, with an emphasis on transitioning these skills to an industrial position. After working for many years in the energy, I have developed a high interest in the research and design process, which is why I am hoping to return to school for a PhD in Engineering.

I am choosing to apply to Columbus State University because it offers a holistic, nonbiased curriculum which will offer me the ability to not only enhance my knowledge in the field, but also nurture my ability to perform research on a variety of different energy topics. During my masters work and my subsequent work experience, I predominantly studied solar energy, and I hope to be able to learn more about wind and hydraulic energy as well. Columbus State offers students the opportunity to rotate through three different labs with different research focuses, which will allow me to make the best choice for my career goals.

With my background in engineering and my experience in industry, I have realized that my true passion is teaching and conducting active research into newer and more innovative forms of energy. During my time working for Selex Incorporated, I started as a junior engineer, but was quickly put in charge of training and observing new hires. Conveying ideas and inspiring others is what really drives me, and I hope that a PhD from Columbus State University will propel me to the forefront of research in the renewable energy field.

Example of Statement of Purpose for PhD in Pharmacology

Do you need a good statement of purpose for PhD in pharmacology? Look at this incredible **example of statement of purpose for PhD in pharmacology** and create your very own!

The of the most valuable lessons i learned during my research experience is that drugs are constantly evolving to account for new data and discoveries in the field. When I discovered necrosis of the liver in several mice given the drug, the next week, other students in the lab created four new compounds consisting of different reformulations of the drug to test out. These nuances in the art of understanding drug development and formulations require a large institution with state-of-the-art equipment, which is what Jefferson University is known for in the tri-state area.

With a strong research background and history of successful drug discoveries, Jefferson University will surely help me reach my goals of becoming a research pharmacist. I hope to be able to work with patient samples and spectrometry data to design customized medications to better target specific aberrations in patients. As the first hospital in the region to utilize custom-designed medications for schizophrenia, Jefferson University is at the cutting edge of medical innovation.

Computer Science PhD Statement of Purpose Example

Have hesitation on how to write a catchy statement of purpose in PhD for computer science? This **computer science PhD statement of purpose example** was made to cover the whole information on how to draft your own SoP!

SOP FOR PHD IN COMPUTER SCIENCE

For me, computer science is not simply about programming and data structures. It is relevant to every single aspect of technological machinery, from hardware to software. I first became interested in computer science when my father took apart our old computer and showed me how each part worked, and demonstrated how certain connectors could be made to store and transmit information. As I grew older and learned more about the field, I realized that the emphasis had become more on software development and data management than a science of research and discovery. Im applying for a PhD in computer science at Carnegie Mellon University because I believe that Computer Science, like any other science field, needs more active research into how to push the boundaries of capability in addition to marketability.

During my college years, I believed that I wanted to become a software developer and programmer. After graduation, I started a job as a programmer at a midsize computing company, designing software solutions for corporate usage. However, it wasnt long before I started wondering how these corporations could consolidate and merge their databases, using less virtual storage space and computing power by simply reexamining their algorithms for retrieval and storage.

The name of Carnegie Mellon speaks for itself, as it is a world renowned institution with a penchant for pushing forth new ideas and unique researchers. I have loved the field of computer science since I was a young child, and I hope to eventually become a professor who can pass on my knowledge and passion for the field onto others. As a teaching university, Carnegie Mellon offers numerous opportunities for its graduate students to take part in teaching internships and seminars, which will greatly enhance not only my career, but also my love for academia.
