

Al Andalus Hospital Private

Under construction

Introduction

- ▶ In line with the government's directions in the development of medical infrastructure in Iraq, the private health sector represented by Al-Andalus Hospital in cooperation with the Iraqi Ministry of Health and the Baghdad Investment Authority to establish a specialized and advanced center for the diagnosis of cancer, including the production of cancer diagnosis locally in the first specialized center equipped. It is the first of the kind in Iraq, the center of the race and the first in Iraq in terms of the introduction of advanced devices such as (PetCt scan, Cyclotron) Gamma Camera, CT scan, MRI and equipment equipped by the company (GE), the US is the authority in terms of processing and maintenance and accuracy of work. And The company has all the required international certificates, as well as two linear accelerators from Elekta. The hospital consists of two buildings connected by a special bridge. The hospital consists of (110) beds and (6) modern operating theaters equipped with the latest advanced equipment.
- ▶ HCG, one of the world's largest specialized companies, will manage the cancer treatment centers, currently operating 42 hospitals in India and abroad, enrolling 60,000 new patients each year at its various centers, and managing the center. Operating devices and all technical issues as well as you will provide us with reports.

Introduction

- ▶ The Founders of Physicians and Shareholders who are interested in the honor of our country honor this medical project to promote the medical practice in our beloved city of Baghdad and the whole of Iraq. The idea of the project is the desire of many founders and shareholders to establish a hospital that combines advanced and advanced specialized centers with a single infrastructure in a modern scientific environment. International guidelines, a globally consistent clinical pathway, and high-quality medical practice as we used to do during our training and practice of our high school in and out of the country.
- ▶ During the study of the development of the health care system to contribute to the renaissance of Iraq, we are also pleased to meet our will to provide a successful model in medical practice through this project.

About the Project

- ▶ The building is expected to consist of a ground floor or eight floors on an area of approximately 1400 square meters, one of the most advanced medical centers and an area of more than 13 thousand square meters and a capacity of more than 70 beds. The project of Andalus Hospital, in the eastern section, where the high population density and natural extension For the province of Baghdad and the urgent need for a distinct health service, the owners are keen to provide outstanding service to the city of Baghdad and the neighboring provinces.

The service is based on the following vision and message:

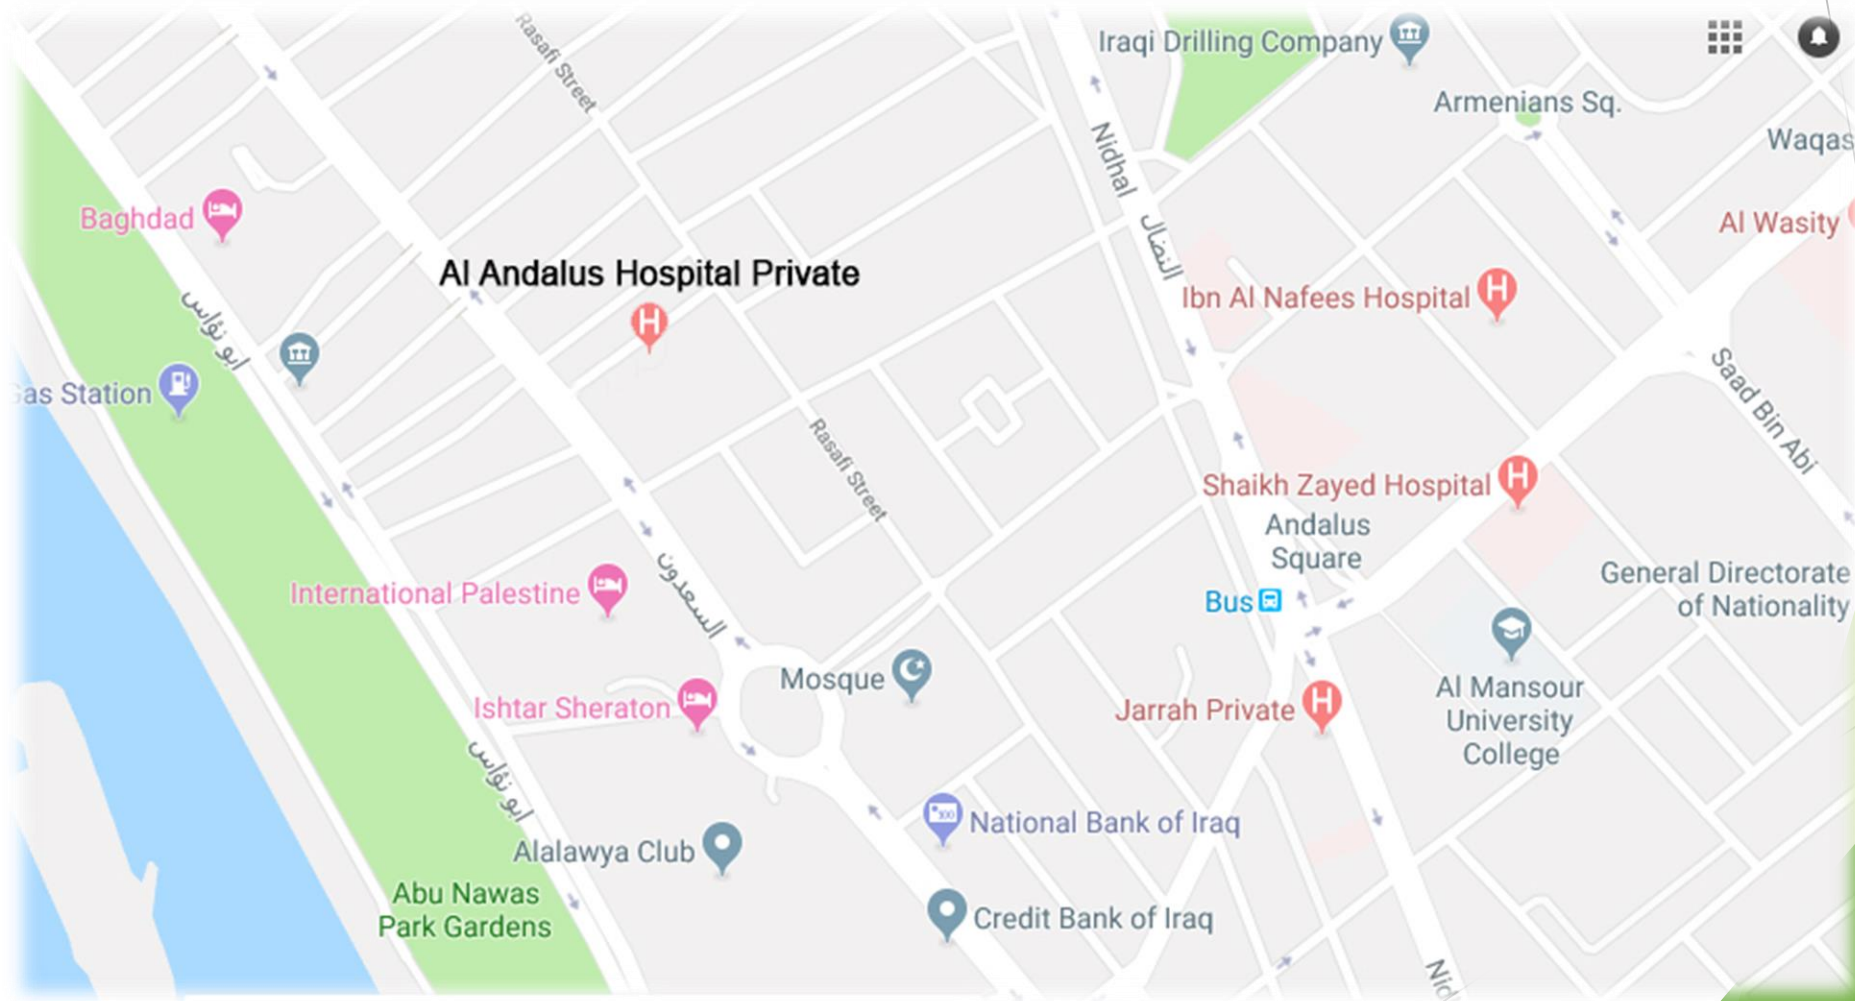

- ▶ 1) Providing a world-class health service.
- ▶ 2) Modern medical centers with a common infrastructure.
- ▶ 3) Ensure job opportunities for shareholders and founders.
- ▶ 4) community service and the role of educational health.
- ▶ 5) Scientific research to support the progress of Iraq.
- ▶ 6) Practical training for doctors, nurses and technicians.
- ▶ 7) Establish a database for patients and repeaters in regular medical files.

Location:

- ▶ The project is located in the beloved capital of Baghdad in the main center of the eastern gate opposite the Sheraton and Ishtar, a center of medical services and provides service to all the people of Iraqi provinces because it is in the center of the capital
- ▶ Project in Baghdad Governorate - Bab Al-Sharqi Baghdad Governorate Center where the urgent need for such a project because:
 - ▶ • High population density (Baghdad population is 8.4 million).
 - ▶ • Lack of major medical facilities.
 - ▶ • The main roads leading to several cities and governorates in the east and west, south and north.
 - ▶ • Distance from competition and coordination between hospitals and health centers.

Location:

The building

- ▶ The opportunity to build an area of approximately 1,400 square meters with a total height of 9 floors gives a great opportunity for future expansions and progressive development of the completion of the project and also to give adequate and adequate space for the infrastructure and administrative and service accessories for the hospital. There is no better than to design engineering and construction as a medical facility. Apartments as in most private hospitals Baghdad.
- ▶ In addition, the fact that the extension of the expected comprehensive insurance umbrella in the coming period makes the availability of a distinguished hospital in that area will increase the chances of contracting with it taking into account the high population density and the lack of competitive entities
- ▶ The involvement of landowners in the project reflects the trust and positive expectations of the success of the project.
