

Tempered Glass Screen Protector – Excellent Transparency

[Tempered glass screen protector](#) does not require that you compromise on the transparency rendered by the iPhone tempered glass. With the installation of the [screen protector glass](#) you still retain the transparency of your original [Screen tempered glass](#). And it goes without saying that this is being used for its shatter proof nature. Therefore, even if you drop your phone and even if your screen protector should crack, it will not shatter and your original glass will be protected.

By using this, you are protecting your phone from the damages of heat as this glass is heat resistant, which is very important for any gadget. If you have this in place on your iPhone, a horrific crash can mean little damage to the original glass of your iPhone. Breaking your glass need not happen only with a horrific crash - a mere slip away from your hand can mean that your phone is breaking. You save your phone from a lot of crash and crack situations if you will have this protector on.

Protection is prevention. There are many who argue about whether this is necessary or not. They say the iPhone company has put in safety in place, and some say it is an additional expenditure. High time we understand the importance of protection. Prevention is prevention. Something is not bad unless it happens. Regrets happen only after an incident happens. It is better to be proactive in using this screen protector.

After all, you need a neatly functioning iPhone. When your screen cracks, the touch function fails. And, if you can imagine what an iPhone is without a touch function, you will realize how important it is to have a screen protection in place. Even now with the protector, the break happens but your original screen will remain safe and intact and you can simply remove this and start using your phone without any delay. Don't forget to replace the protector with a new one.
