Products: 250 tablets stanozolol 5 mg
100 tablets mesterolone 25 mg
20 mL trenbolone acetate 75 mg/mL.

All Weeks: Liver Support: Liver Stabil, Liv-52, or Essentiale Forte (label recommended dosage).
Cholesterol Support: Lipid Stabil (3 caps/day) and Fish Oil (4g/day).

Comments: Stanozolol and trenbolone are popular steroids during cutting phases of training, and impart strong anabolic and moderate androgenic effects with no significant estrogenicity. This combination helps to impart a strong fat loss/definition-enhancing effect. Two 25 mg tablets of mesterolone have been added per day to supplement additional androgenic activity, which should help maintain normal libido and sexual functioning. Additional anti-estrogenic drugs should not be necessary. Some more aggressive competitive bodybuilders may enhance this cycle by adding HGH, clenbuterol, and/or thyroid hormones. Higher doses of the individual steroids may also be used, but are expected to impart stronger cardiovascular and hepatic strain, and are generally not advised.
