Laser Fat Reduction In Dubai

Selective Thermolysis: [Laser Fat Reduction](#) is designed for precise fat cell targeting. The lasers are specifically tuned to be absorbed by fat cells while sparing surrounding tissues.

Fat Cell Disruption: As a result of the interaction with the low-level laser energy, the fat cells release their stored triglycerides, making them accessible for natural metabolic processes.

Laser Fat Reduction In Dubai

Laser Fat Reduction Works:

Laser fat reduction is grounded in the principles of photobiomodulation and selective thermolysis. During the procedure, low-level laser energy is directed at the targeted area. The key steps in the process are as follows:
