I. Introduction of **MYGA**

MYGA provides a **decentralized financial asset** which rewards users with a sustainable fixed compound interest model through use of its unique contract.

The "Multi Yield Generating Asset" (**MYGA**) is a new financial protocol that makes staking easier, more efficient and awards **\$MYGA** token holders one of the highest stable returns in crypto.

Our contract gives the **MYGA** token automatic staking and compounding features, and one of the highest Fixed APY in the market at **399,025.80%**.

Our contract uses a complex set of factors to support its price and the rebase rewards. It includes an Insurance Fund which serves to achieve price stability and long-term sustainability of the **MYGA** Protocol by maintaining a consistent **0.02356%** rebase rate paid to all **\$MYGA** token holders every 15 minutes. MYGA Protocol also provides reflections from every sell and buy in form of **\$BNB** and **\$BUSD** paid out once a week to every **\$MYGA** holders.

The **MYGA** development team has coordinated all of these elements together so they work seamlessly behind the scenes. The result is a simple and elegant staking and rewards system for **\$MYGA** holders.

II. How does **MYGA** work

MYGA is a Auto-Stake Contract with is a simple yet cutting-edge function called Buy-Hold-Earn, that provides the ultimate ease of use for **\$MYGA** holders. MYGA is a fork of SAFUU with new Featrues to provide consistent grow of our Asset.

Buy-Hold-Earn - By simply buying and holding **\$MYGA** token in your wallet, you earn rebase rewards as interest payments directly into your wallet. Your tokens will increase every **15** minutes.

Using a Positive Rebase formula, **MYGA** makes it possible for token distribution to be paid directly proportional to the epoch rebase rewards, worth **0.02356%** every **15** minute (**2,26176%** each Day) epoch period of the total amount of **\$MYGA** tokens held in your wallet. The rebase rewards are distributed on each EPOCH (15 minute rebase period) to all **\$MYGA** holders.

This means that without moving their tokens from their wallet, **MYGA** holders receive an annual compound interest of **399,025,80%** for Year 1.

III. Tokenomics

\$MYGA is a Bep20 token which rewards its holders with automatic passive interest payments every 15 minutes with two reflections in **BUSD, BNB** and **MYGA** Token over the lifespan of 13.5 years until the maximum supply of 3.25 Billion tokens has been reached.

Is **MYGA** just another SAFUU Fork?

Our entire protocol's smart contract was written and developed by our developers. It does contain some resemblance to SAFUU's code which allows for complete protocol sustainability.

We also have several proprietary mechanisms in place that we have created ourselves which offers many improvements over our competition like other SAFUU forks such as; our **MYGA** Auto-Liquidity Engine, the **MYGA** Insurance Fund, the **MYGA** VOID; a automatic Token burn feature, aswell as our **MYGA** Lottery.

MYGA's buy and sell fees are an important component of the MYGA protocol. They provide capital for performing critical functions to the protocol to guarantee a sustainability. The amount of the fees (16% for buys and 20,5% for sells) allows **MYGA** to provide **\$MYGA** holders with the stable high yield of **399,025.80%** annually.

IV. Special features

IV. I. The Lottery

Our **MYGA** lottery ensures permanent buy/hold pressure. Each week we take a small percentage of our "**MYGA Treasury Income Strategy**" (MTIS) and give it to 10 lucky holders of our **\$MYGA** token. By simply holding, you can win the **MYGA** lottery. Every **\$MYGA** is also a lottery ticket

IV. II. Hidden feature

Our **MYGA** Hidden feature will be a whole new innovation in the crypto space. We want to keep it a secret by now to avoid that other projects steal it from us. it guarantees a stable and steady price increase above the public sale price.

IV. III. Reflections

Our contract gives **\$MYGA** holders reflections in the form of **\$BNB** and **\$BUSD**. For every buy or sell someone makes, 6% is paid out as reflections once a week in the form of **\$BNB** and **\$BUSD** to each **\$MYGA** holder.

V. The Void

1.5% of all **\$MYGA** Sales and Buy's traded are burnt in The Void.

The more that is traded, the more get put into the Void causing the Void to grow in size, larger and larger through self fulfilling Auto-Compounding, reducing the circulating supply and keeping the **MYGA** protocol stable. This also means that the Void itself will get rebases and grow in size every 15 minutes!

The other benefit to an everlasting burn of circulating supply is that due to the deflationary nature of it, equates to a higher value of each **\$MYGA** token, therefore increasing the individual value.

VI. Treasury Distribution

The Treasury plays a very important role in the MYGA protocol.

It provides three extremely critical functions for the growth and sustainability of **MYGA**. The treasury functions as additional financial support for the Insurance Fund. This additional support can become important in the event of an extreme price drop of the **\$MYGA** token or unforeseen black-swan event. It helps to establish a floor value for the **\$MYGA** token.

The Treasury may also be used to fund new **MYGA** products, services, and projects that will expand and provide more value to the **MYGA** community as well as providing funding for marketing.

We want to make sure that our Treasury grow not only from our tax (2,5 % buy and 5% sell tax) but also by **MTIS (MYGA TREASURY INVESTMENT STRATEGIE)** a smart community-controlled Investments to generate permanent growth for the project.

VII. Auto-liquidity

Market Liquidity is important and plays a vital role in allowing the buy & sell of **\$MYGA** tokens on PancakeSwap.

We split the Liquidity as a big pool of money 50/50 between **\$MYGA** tokens VS **\$BNB** tokens. When somebody buys **MYGA**, the price per **MYGA** will go up and the ratio above will also change at the same time to account for this. The same goes in the opposite direction for sells.

Liquidity allows for anybody to buy & sell their **MYGA/BNB** at anytime, however the less money/liquidity there is in the pool, the worse price you get so what our **MYGA** Auto-Liquidity Engine does, is add more liquidity to that pool by itself and therefore solving that issue.

Every 48 hours our **MYGA** Auto-Liquidity Engine will inject automatic liquidity into the market. On each Buy/Sell order there is a 4% tax fee that automatically gets stored into an Auto-LP wallet. 50% of the amount of **MYGA** stored in the wallet will automatically buy BNB.

The remaining 50% of **MYGA** in the Auto-LP wallet will be used for the **MYGA** side of liquidity, therefore giving equal an 50/50 weighting of **MYGA/BNB** which will then be automatically added as new, additional liquidity. Our Contract will do this every 48 hours by adding more and more liquidity to the pool.

VIII. Insurance fund

Our Insurance fund uses an algorithm that backs the "**Rebase Rewards**" and is supported by a portion of the buy and sell trading fees that accrue in the Insurance fund wallet.

In simple terms, the staking rewards (**Rebase Rewards**) which are distributed every 15 minutes at a rate of **0.02356%** are backed by our insurance fund parameter, thus ensuring a high and stable interest rate to **\$MYGA** token holders.

4% of every buy and 6% of every sell are stored in the Insurance fund wallet which helps sustain and back the staking rewards provided by the positive rebase.

This insurance fund is there to avoid a flash crash from price stability and ensure MYGA's price stays strong.

IX. Roadmap

Age 1.0

- ✓ Launch Discord & Twitter
- ✓ Launch V1 Website
- ✓ KYC by Validproof
- ✓ Bounty campaign
- ✓ Growing Community
- ✓ Whitepaper V1
- ✓ 250 Discord Member

- ✗ Dynamic Tax
- ✗ Auto-Staking, Auto-Compound

X. Wallet Booster NFT's

Our **MYGA** Booster NFT's are for everyone who wants to get some special features on their way to passive income with **\$MYGA**.

Anyone who buys and holds one of the **MYGA** Booster NFT's will receive a small share of our **MYGA** Treasury Investment Strategy (MTIS) and double their lottery tickets and get a better chance of earning more passive income (TBA).

With the funds we raise from auctioning our **MYGA** Booster NFT's, we will invest in marketing, **MYGA** liquidity and some key steps that result in strong value and continued growth.

With one of our **MYGA** Booster NFT's you are a strong supporter of our project and our vision of the future.

Everyone who buys and keeps a **MYGA** Booster NFT is a strong supporter of our project and we will never forget that. If you buy one of these NFT's you will be rewarded generously by us but more on that later.

Thank you for reading our Whitepaper.

our project thrives on your ideas and your support! we would like to ask you to follow our social media channels and if you have any questions do not hesitate to write to us at any time.

With best regards, your **MYGA.Money** Team!
