Question No. 1

An administrator needs to initiate a new VDI project within a couple of months. Prism Central reports there are no storage resources to accommodate such workloads.

The administrator sees many powered-off VMs and has the authority to delete test VMs powered off at least for 30 days. Test VMs belong to the Test category.

Using Prism Central, which steps are required to identify the correct VMs to be deleted?

- **A.** Use Capacity Runway to filter by Test and Powered-off VMs
- **B.** Filter VMs list, choose Test category and Inactive under Efficiency
- **C.** Create a new Scenario selecting Test VMs. filter by uptime
- **D.** Create a new Project selecting Test VMs, sorting by power state

Answer: B

Question No. 2

Refer to the exhibit.

User	Quota	Enforcement
All Users	No quota limit	
fileslab\user1	5 GiB	Soft
All Users in "AAPM"	10 GiB	Hard

User 1 and User 2 belong to the AAPM group

What are two descriptions of how Files perform quota management? (Choose two.)

- **A.** User 2 can continue to add another 3GB file but will receive a daily notification email.
- **B.** User 1 can continue to add another 5GB file but will receive a daily notification email.
- **C.** User 1 can add an 8GB file to the share without receiving notification.
- **D.** User 2 can add an 8GB file without receiving a notification email.

Answer: B, D

Question No. 3

A customer wants to run SAP HANA on a Nutanix cluster with the following characteristics:

* AHV nodes

* SAP HANA version 2

* Production database files

Which configuration should be recommended to the customer?

- **A.** Start with a cluster containing three or more nodes
- **B.** Enable only compression for the container that contains the Production database
- **C.** Do not enable compression, deduplication, or erasure coding on the storage container
- **D.** Plate the SAP HANA Database on the same socket as CVM

Answer: C

Question No. 4

An administrator knows that the disks in a cluster are out of date and a new firmware is available. For security reasons, these clusters do not have access to the Internet.

Which two steps must be completed to update the firmware? (Choose two.)

- **A.** Configure LCM with a URL to access the firmware bundle.
- **B.** Download a dark site bundle and stage it on an internal webserver.
- **C.** Download the updated firmware .tgz file from the Nutanix portal.
- **D.** Select Upgrade Software, then select disks and upload the updated firmware.

Answer: A, B

Question No. 5

An administrator is managing multiple Windows and Linux VMs connected to Nutanix Volumes. The Linux VMs are experiencing intermittent connectivity issues. The Windows VMs do not experience the same issue.

Which option should the administrator use to resolve this issue?

- **A.** Utilize Jumbo Frames
- **B.** Add additional disks to the Volume Group
- **C.** Set the SCSI timeout value to 60
- **D.** Utilize a separate subnet for the Linux VMs

Answer: C
