

INTRODUCE THE ANVIL CARRACK

ANVIL CARRACK

ADVENTURE CALLS AND ANVIL AEROSPACE ANSWERS WITH THE CARRACK. BUILT TO ENDURE EXTREME CONDITIONS.

The Anvil Carrack features reinforced fuel tanks for long-duration flight, an advanced jump drive, and a dedicated computer core for jump charting operations. On-board accommodations include crew medical and repair facilities, and a mapping-oriented sensor suite

CARRACK IS EXPLORATION

Discover the untapped knowledge of the cosmos and harness the innovation of eons with the Carrack's peerless

CARRACK IS DISCOVERY

Our universe is as diverse as it is vast. The Carrack brings you face to face with the extraordinary cultures and spine-tingling vistas of far-flung worlds.

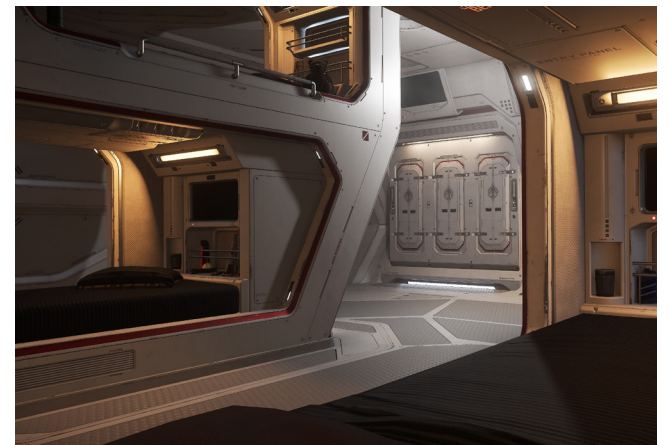

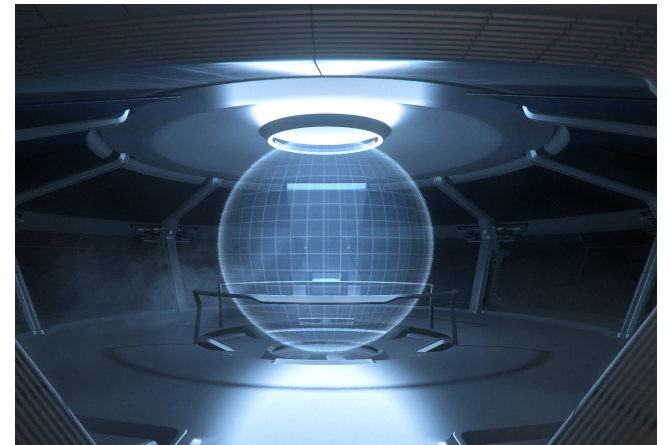

CARRACK IS ADVENTURES

Making new discoveries and finding treasures in the furthest reaches of space involves the occasional risk. Your Carrack and crew will be ready for anything though; with an iron-clad military pedigree, no exploit is too audacious.

CARRACK IS HOME

For all the wonder the unknown offers, even the most intrepid explorer needs a place to call their own. With the Carrack, your home travels with you everywhere and anywhere.

Anvil's vaunted pathfinder is better than ever. The most complete multi-crew explorer on the civilian market lets you call every corner of the universe home.

URSA

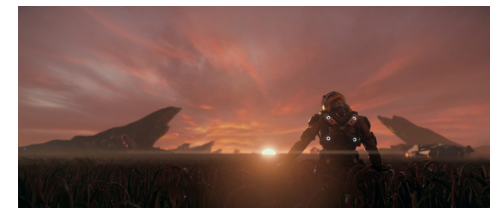

Take your expedition planetside in RSI's legendary all-terrain Ursa Rover. This industry standard in ground-based scouting, mapping, and discovery comes supplied with every Carrack.

Built by RSI specifically for the planetside explorer, the Ursa Rover offers civilians military-grade all-terrain capabilities and stands as the rugged standard in ground-based scouting, mapping and discovery applications.

TECHNICAL SPECIFICATION :

LENGTH :	8.0M
MASS :	11,732KG
CARGO CAPACITY :	4 SCU
SCM SPEED :	40M/S

PISCES

The Carrack comes equipped with a unique C8 Pisces mini-explorer that's ideal for scouting and reconnaissance. The C8X Pisces Expedition is available standalone, with additional firepower over the base variant.

Additional firepower turns the base Pisces into a highly capable mini-explorer. Ideal for inter-system travel or investigating tight spots inaccessible to larger ships, it's a small ship ready for big adventures.

TECHNICAL SPECIFICATION :

LENGTH :	13.0M
WIDTH :	3,25M
CARGO CAPACITY :	4 SCU
SCM SPEED :	140M/S

ANVIL AEROSPACE

Anvil Aerospace, the producer of the famous exploration ship Carrack.

For civilians, Anvil Aerospace produces small fighting craft but with less of the pirate stigma. These ships are more expensive, less spit-and-glue, and built to take more hits than a comparable Drake model. The bulk of Anvil's income is from its military contracts with the UEE to design and build their warships, especially the iconic Hornet. Anvil create also some recon and exploration space ship for the UEE, like the Carrack, the Terrapin and Pisces. Create for Military purpose, the design was readapted and declassified for pathfinding and expedition. Anvil Aerospace is one of the earliest Terran success stories. Founded in 2772, Anvil has been reliably delivering military-grade equipment to the UEE Navy for almost two centuries. The initial Anvil skunk-works facility was located in Nova Kyiv, Terra, and the company's headquarters are still there. For the first seventy-odd years of Anvil's existence, every design project was personally lead by company

founder J.Harris Arnold. Arnold, an eccentric spacecraft designer of the old school who insisted on signing off on every part of his designs' subsystems, was a beloved figure in an otherwise cutthroat industry. Today, Anvil has factories on three dozen UEE core worlds ... but continues to source all systems itself and requires that the standing CEO sign off on every spacecraft alteration. The company's moniker comes from a quote in Robert Calvin's famous early justification for UEE expansion, explaining that military spending "fuels the furnaces of expansion and strikes the anvils of innovation." There's little argument: fueling the furnaces of expansion is exactly what Anvil has been doing since Day One. The company has produced dozens of successful and iconic military and non military spacecraft over the years, including the Hurricane, Osprey, Devastator, Hornet and Gladiator, Crucible, Terrapin, Crucible, Carrack, Pisces, Valkyrie. No military campaign in the last two centuries has been launched without Anvil spacecraft in the forefront, and no carrier in UEE space today operates without at least a squadron of Anvil-designed fighters.

In fact, Anvil designs have historically scored more space-to-space kills than any other military spacecraft. Hornets, in particular, have destroyed more enemy hardware (measured in star credits) than all other current Navy space fighter designed combined. Anvil answer the call of UEE for the Militia Mobilization Initiative that autorisate the sale of classified military ship. This innitiative up the sale of the corporation and the benefite.
