

# BEST FREE Server Hosting Available For Minecraft JAVA & BEDROCK

Minehut is the best free server hoster. People complain that they cannot join without an owner online. This can be handled by joining the Minehut lobby at minehut.com and then doing /join [servername]. The server will start up in around half a minute. Sidenotes - People living in Oceania will experience high levels of ping due to minehut's American data centre. A single server can host 10 players, making it ideal for small groups of friends. 2. Playing Games Is Always Fun Idlehost \* \* Idlehost can be a great hoster, but its poor performance is one of many reasons it fails. You can get good ping from Germany's data centres. However, it is not possible to host in every spot. The server can be run 24/7 if the server tab is open. The downtime can range from 30 minutes up to 70 percent of the day. However this is a relatively new server hoster so hopefully it'll get better. This hoster is ideal for hosting a 24/7 server but has poor performance. [Link](#)

3. Aternos \* \* \* \* Ah, Aternos, the saviour of Bedrock. Both Java and Bedrock are possible to host. The server's RAM increases the more people are playing. It's hosted in America, which is good for most people. It also offers more customization options than any of the others. However, it is not able to run 24/7. It is necessary to wait in a line and then people must join the queue. Otherwise, the server will shut down in 3 minutes. Otherwise, this is a good and reliable server hoster.

I hope this has given enough information to allow you to create your own server. You could also consider paying for them if they are not available. These are some of the top paid server hosts:

Shockbyte (people complain about its customer services though)

You have it! A nice list of servers. I hope the start rating helped as well.
