Veloren, the free and Open Source Multiplayer Voxel RPG, has a Major Release Out

Are you looking to play a different quality free and open source game? Veloren is a multiplayer voxel RPG inspired by games such as Cube World, Legend of Zelda: Breath of the Wild Dwarf Fortress, Cube World, and Minecraft. It was developed using the fancy Rust programming language, Veloren has grown massively in the last year and is gradually evolving into what could potentially be the next truly big FOSS game.

Some of what's new in this release include:

- New Skills for Climbing: Climbing Speed and Climbing Cost - Pickaxes (can be used to collect gems and mine weak rock) - You can now jump out of rolls to get an additional jump boost Dungeons now come with a variety of stairs. Minecraft Trades now show item prices in tooltips. - Attacks now emit sound effects from the target upon hit. - Crafting menu tabs - Auto camera setting making it easier to play with one hand. Topographic map option - Search bars for social and crafting window - Guards and villager are now spawned with potions, and they know how to make use of them. - Combat music when enemies are within distance. - One handed weapons can now be used and found in the world - Players can now opt-in to server-authoritiative physics in gameplay settings. - You can sort your inventory using the button. Crafting stations are now accessible in towns. All not translated content can be displayed in English. - New large birds npcs - Wildlife spawns that are dependent on the daytime - You can now block and parry using melee weapons - Lift is now calculated for gliders on the basis of dimensions (currently identical for all) The tracks that are specific to a particular game can now only play in towns. Map markers that are custom made are now available mountain lake and peak markers on the map. Added a minimap mode that shows the terrain within an area. Chat tabs - NPC's can now hear certain sounds

This is a small portion of the full and quite long changelog for the 0.10.0 release.

Download from the Veloren website. It is possible to download it in a variety of ways, including direct download with an application that keeps it updated, Flatpak, Snap, and many other options. It's available for download now by visiting the official server. It's free and small so it doesn't require any space.
