Dear Hiring Manager,

I have a keen interest in applying for the Senior Software Engineering opening at <company>. <company> is known to have a diverse and inclusive environment, and I would appreciate an opportunity to be part of that team.

I have 5 years of professional Software Engineering experience working on full lifecycle product development. Through which I have gained experience in both the technical and project management aspects of designing and releasing a new product. My responsibilities included translating Product Owner's requirements into Software Requirement Specifications, creating and managing schedules and deadlines. Along with interfacing with Customers and other product stakeholders for feedback and new requirements. I am confident that these skills would fit well with the project management responsibilities required by the Senior Software Engineer position.

My technical responsibilities included developing robust C/C++ embedded Linux applications for industrial control systems. To ensure the quality of the code, I worked with other development team members to create and execute unit and integration tests (both manual and automated Python based tests). I also acted as a content matter expert for multiple products, which enabled me to mentor new development team members.

I want to thank you for taking the time to consider me for this position. <company>has provided excellent and dependable service to many friends and family and I would like the opportunity to contribute to that goal with my enthusiasm and skill set.
