Take 30-50mg of Dbol daily (with food if you can) for a cycle of 4-6 weeks. Stick within that cycle, as its toxic trait (as like Anabol) and damaging effects to your liver are increased when taken beyond 6 weeks and in high dosages. If you're determined to go down the Dbol only cycle route, try stick to 4-5 weeks.

The best time to take Dianabol is in the morning, with breakfast. This will help to ensure that the steroid is absorbed quickly and efficiently. Dianabol can also be taken before a workout, as this can help to improve performance and energy levels. However, it is important to note that Dianabol can cause stomach upset, so it is best to take it .

I couldn't tell ya the last time I needed an AI, maybe 8-9 weeks ago. . sounds like a solid plan to run dbol though at 20 mg. And if you're on trt should be a breeze because I'm guessing you're already taking

an AI protocol. Should put on 8-10 lbs of mass if your diet is clean and do cardio 5x a week. BabyAMG

#1 Guys, This may have been mentioned in the past but wanted to get some new input. Does anyone know of folks who are on TRT and use low dose D-Bol 10mg year round or on an extended period of time? Any thoughts on this proposal? If diet, water consumption, no alcohol, and organ supplements are

lockedin, it is really that bad? Thanks L heymrwaters

Taking dbol year round at <20mg is fine. Oral liver toxicity is overblown. I'd rather take dbol everyday than take estrogen. You don't know plenty of people who need estrogen , you're just trying to justify your stupid choices. I really don't give a shit what you do with your life but don't come here and act like a moron.

Experts say that people begin to see results around 4 to 6 weeks after taking 25 to 30 milligram doses each day. Advanced bodybuilders should increase this dosage. However, research and experiments show that the benefits of the steroid peak and end once the dosage level reaches 60 to 70 milligrams each day.

## When is the Best Time to Take Dbol? - RobertoGiraldo

#1 I've heard 10-15mg is equivalent to TRT dose when it used to be used for that. With that in mind I've seen dose recommendations from 20mg to 70mg. But it's not clear if those are stacked dosages. So would a higher dose, 30 - 40mg be better on an oral only cycle? I know everyone says if you're gunna do em do em proper and inject 500mg test.

## When To Take DBOL - Supplement Timing

When you add into the equation increased bad cholesterol; severe liver and kidney damage; water retention; high blood pressure; reduced natural testosterone production - yep it can do the exact opposite of what you want by harming your body's natural ability to make testosterone - AND gynecomastia (i. e. moobs!); these perks no longer seem so app.
