

Minecraft: Pocket Edition now Available on The Android Marketplace

A couple of hours ago, Carl Manneh, Mojang's managing director tweeted that the Android version of Minecraft is available to download from the Android Marketplace, albeit a bit late. We should have checked earlier but we were still making the shingles perfect for Joystiqia, our floating palace city.

We did check (eventually) and found that Mr. Manneh, sure enough we're not pulling our chains -- Minecraft: Pocket Edition is currently available for \$6.99 on the Android Marketplace. And if you want to be sure of what you're getting with those seven dollars, there's an unlocked demo available for download.

We're now required to return to our palace If you'll allow us to. There's a massive Chris Grant bust he's making us build in the foyer.
