

Want To Make Your Game Server Public?

What if you have never done this before? We have guides to help.

Discord Reviews

10/10 wtf i received 13 pings following the update to wtf

8/10 It's a pretty good score, but I don't know why it's so bad.

PERFECT! Perfect in every way. would use this program for any type of game server

8/10 Original version has a solid 20 tps serverside and a better fps at my host computer. It also has a more easily remembered domain than other competitors. I've experienced some minor glitches with OG and the beta version of the OG is not yet mac-compatible.

gud. 8/10

Playit Beta Version: 10/10

It's a solid 8/10. It's super easy to connect with friends and play. I would give it a 10 if it let me chose a server location and make a custom ip, other than that its amazing,

Playit gets a 9/10 in this review. It's a solid service thats free and helps me host servers without port forwarding. The reason I gave it one less point is because I noticed sometimes that playit doesn't properly handle ddos attack. After a few seconds of flooding playit will freeze. You can fix it by pressing a few keys. It will then respond fine. If that could be fixed, this program would get a 10/10. Thank you for providing this free product for everyone.

10/10 Forgot that this place existed. I was able to run it with my 4GB RAM pc, even though the server was open

10/10 I understand that things like this can have its ups and downs. I can see the potential to make this a better service and provide a better experience for users in the future. The server has not slowed down so far and I'm having fun with my friends. been using it for 2weeks I encourage you to support play it gg by availing stuffs in it. I would like to be a game designer in the future. I can understand if it gets a low rating.

10/10 It's so much easier to configure UDP and TCP correctly now, it's so easy!

10/10 Played with my friends, had a lot of trouble port forwarding but this was the best and I set up a custom ip with no playit.

10/10 I had so many problems with port forwarding, and all that stuff, and this thing solved them for me cleanly. It works amazing and there is very little to no server latency

8/10 because i have lower ping i america than brazil when i live in brasil wich is ????? ?

9/10, because ping can be weird and sometimes down

This app is fast and reliable. The support was amazing and was straight to the point.

10/10 this has to be the best thing ever invented i no longer have to do like
157349852378947892347894897238974238974 gazillion things just to allow people to join
my mc server its fast reliable and very easy to use

The best service is often overlooked and it's very affordable.

its really good i love it actually not even lying i would say this is a lifesaver saved me soo
much time its just my friends get disconnected sometimes other than that its 10/10

420/69

Is amazing but the ping

It is not yet rated. Amazing program. It fixes my port forwarding problems, but it has some
connection issues.

u keep same ip 10/10

I am a Minecraft teen. 1000000000000/10 No Words. Just OP Burh. I tried this for about 2
years. It was not continuous. But you guys did it like a snap. Thank you. This means a lot to

me.

7/10 Shouldn't be this simple, you'd think there's a catch but it's not. It should have been out sooner. WOWWIKI.ORG Simple Flexible Great UI Responsive F Re E Ping really fast for some reason Constantly getting disconnected

10/10 giving my thanks to the creators and contributors of this program! Yesterday, I was stuck trying to port forward for six hours. I tried everything I could and failed. I discovered that my isp is blocking ports. I found a video tutorial for this program. It worked. It works for me and my friends. Thank you guys!

10/10 Starlink is the only way to host a starlink server because it uses cgnat:

8/10 ping is a little high, but I could play together

10/10 I host my own little server for my friend and have no problems

10/10 It is very good. Although it may seem confusing at first, you will soon get the hang it once you understand it.

9/10 It is good, the speed that the domain & port doesn't alter at any boot is very impressive. -1, however, it can completely crash sometime and the Discord Auth is very glitchy

8/10 server sometimes has lag when building blocks but it's still good. Ping is quite poor. 100-150 ping, but still a great program.

I would rate 10/10

9/10 does the job and would use it again

9/10 cannot remove tunnels, but it's okay to ping. Good program

/10 - Extremely simple to use and saved me lots of time. My ISP blocked my ability to get my router to portforward :))).

8/10 Very helpful, as I can't port forward and it keeps disconnecting me

10/10 saved me time and effort in port forwarding

To show my gratitude, I joined this Discord server.

10/10 saved me against cgnat

9/10 This shit is why me and the boys can play together. Only 1 point was lost due to occasional downtime

10/10 better than Hamachi Shitty

6/10 great solution Bult gets overwhelmed with 11 players in minecraft

9/10, oh my goodness this saved me so many hours

This is the greatest thing that ever happened.

10/10, I host minecraft server through termux and it runs well

9.9/10 but there is a ping drop, but not major

10/10 sus rating

9.5/10 Absolutely Perfect! Low ping, works with any minecraft server, from a server at mc 1.16.5 with my friends to a server at mc 1.5.2 to play after i've finished my school work
