How are Diamonds Formed

Let's start with natural diamonds. These are formed and found about 100 miles below the earth's surface. At this depth, carbon-rich rocks are provided with sufficient heat and pressure to melt. The high temperatures are generated by the earth's mantle, a layer made of molten rock that is compressed by the pressure of miles and miles of earth on top...

Qualitative

Qualitative research is generally much less structured and is often described as more "exploratory" or "directional" because it attempts to reveal new attitudes or perspectives that may exist with regard to a topic or product category. Qualitative can be described as more free form, often with broad questions such as "what do you like about that?..."
