## Rethinking 2-Point Conversions and 4<sup>th</sup> & Short

Patrick Walsh April 2020

### About Me

- Background in Business Administration (Business Analytics & Finance)
- Work Experience: Kearney, Routinely (NYC rental workout clothing startup),
  Binghamton University Student Association
- Leadership Experience: HS Football Captain, VP Pledge Education for Delta Sigma Pi
- Life-long competitor and sports fan
  - Grew up playing football, basketball, and gaming (interest in Esports), working towards first marathon

### Overview

2-Point Attempts

4<sup>th</sup> Down Attempts

Takeaways

### **Presentation Overview**

- This presentation was designed to further explore NFL Data while honing my skills in SQL, Tableau, and Excel
- The findings are useful for NFL coaches, sports journalists, fans, and others looking to research NFL data
- The data was compiled by a group of Carnegie Mellon researchers and is available on Kaggle<sup>1</sup>

### **Experimental Procedure**

#### <u>Questions</u>

 Are teams becoming more aggressive on 4th and short & in 2-point conversion situations?

 What are the play call tendencies in these situations? Has it changed over time? Does the situation in the game influence it?

 Is there a more successful play type in these short yardage situations?

#### <u>Analysis</u>

- Time series analysis of attempts by season and as a % of total opportunities (2-point attempts/touchdowns, & 4th down attempts/total 4th and short opportunities)
- High level breakdown of pass/run frequency and conversion in each situation, followed by deep dive factoring game-state pressure1 and field position2

#### **Findings**

- 2018 2-point conversion attempts are 2.28x that of the 2009-2014 average, and 1.49x the 2015-2017 average
- 4th and short was attempted more often in 2018 despite fewer opportunities
- Passes are heavily favored (75%) in 2-point conversion and 4th and 2 situations, runs in 4th and 1 situations (73%)
- Increased pressure leads to higher likelihood of passing
- Runs are more effective on all play calls, yet are called far less often than pass plays on 4th and 2 and 2-point conversions

### Definitions

#### Play Type/Play Call - Run or Pass

<u>Play Type Frequency – Number of times a play was called out of all attempts in a given situation (stated as a rate or % – i.e. pass plays had a frequency of .7 or 70%)</u>

<u>Total Opportunities/Instances –</u> Total number of times given situation occurs (1000 would indicate there were 1000 plays in which the offense faced a 4<sup>th</sup> and 1), or the sum of attempts and non-attempts

<u>Conversion Rate – The number of successful attempts/total attempts</u>

<u>Growth Rate/% Growth – (Current Period – Previous Period)/Previous Period</u>

<u>Pressure<sup>1</sup> – An assigned value (low, medium, high) accounting for the score differential and quarter in the game (A team trailing by 10 in the 2<sup>nd</sup> quarter would be in a **medium pressure situation**, whereas a team trailing by 5 in the 4<sup>th</sup> quarter would be in a **high pressure situation**</u>

<u>Opp</u> – Opponent's side of the field (within 50 yards of the endzone)

<u>Scramble<sup>2</sup> – A called pass play in which the quarterback decides to run the ball after the play breaks down</u>

<u>PAT – Point after touchdown</u>

### Overview

2-Point Attempts

4<sup>th</sup> Down Attempts

Takeaways

PATRICK WALSH

# The number of 2-point conversion attempts is rapidly increasing, and 120 attempts in 2018 is double that of the average attempts prior to 20151

2-Point Attempts by Season

2-Point Attempts – Ratio Analysis

| 2-Point<br>Attempts                 | 2009-2014<br>(Average) | 2015-2017<br>(Average) | 2018    | 2018 %<br>Growth |
|-------------------------------------|------------------------|------------------------|---------|------------------|
| # of Attempts                       | 52.67                  | 80.67                  | 120.00  | 48.76%           |
| Touchdowns                          | 1281.33                | 1275.67                | 1279.00 | 0.26%            |
| Attempts as a<br>% of<br>Touchdowns | 4.11%                  | 6.32%                  | 9.38%   | 48.37%           |
| Attempts per<br>Team                | 1.65                   | 2.52                   | 3.75    | 48.76%           |

Excludes touchdowns scored in overtime as these conclude the game and no PAT is attempted

Changes in rules (moving back the PAT kick in 2015) was a catalyst for the initial surge in attempts, and teams have seemed willing to further experiment in the subsequent years

Data shows surge in attempts is not tied to an increase in the # of opportunities (touchdowns), rather more willingness to go for 2

2-Point conversions attempts have skyrocketed, and on average, teams will face a total of 4.2 more attempts per 16 game regular season than in the years prior to 2015 (2.1 offensively, 2.1 defensively)

Appendix Exhibit 4 (2-Point Conversion Ratios)

There was growth in 2-point attempts throughout all situations in a game, though low and medium pressure<sup>1</sup> situations saw the highest % change in 20181

2-Point Attempts Over Time – By Pressure

| 2-Point Attempts              | 20<br>( <i>4</i> | )09-202<br>Average | 14<br>e) | 20<br>( <i>1</i> | )15-20:<br>Average | 17<br>≘) | 20:    | 18 Valu | ies    | 2018 % Growth<br>(From 2015-2017) |        |        |  |

| Attempts Per TD by Pressure   | 0.49%            | 1.68%              | 13.04%   | 1.37%            | 4.16%              | 16.22%   | 3.06%  | 7.39%   | 21.80% | 123.64%                           | 77.45% | 34.43% |  |
| Total Attempts Per TD         | 4.11%            |                    |          |                  | 6.32%              |          | 9.38%  |         |        | 48.76%                            |        |        |  |
| % Growth from Previous Period |                  |                    |          | ļ                | 53.84%             | ,<br>)   |        |         | 48.3   | 37%                               |        |        |  |

L = Low Pressure

M = Medium Pressure

H = High Pressure

The dramatic uptick in attempts during **low and medium pressure situations** implies the growth is primarily driven by **more aggressive play-calling early in games** (going for it when not necessary to catch-up or build a lead) and not a product of the "need" to go for 2-point conversions in close games

PATRICK WALSH

# There is an overwhelming tendency to throw the ball when attempting a 2-point conversion despite a glaring difference in the conversion rate of each play type

nversion 2-Point Attempts – Team Breakdown

| Teams  | Pass - Fail | Pass - Success | Total Passes | Run - Fail | Run - Success | <b>Total Runs</b> | Total Attempts | % Passes | % Runs | Pass Success (%) | Run Success (%) | <b>Total Success</b> |
|--------|-------------|----------------|--------------|------------|---------------|-------------------|----------------|----------|--------|------------------|-----------------|----------------------|

Pass plays account for 75% of all 2-point conversion attempts, yet they are not nearly as successful as run plays (44% vs. 58% conversion)

Only 2 teams rushed the ball more than 50% of the time, indicating the distribution of pass/run is a league-wide preference, making game planning for these situations a bit easier

This figure can potentially slightly underestimate the pass total as not all QB runs could be confirmed as scrambles or designed runs<sup>1</sup>

Appendix Exhibit 3 (2-Point Conversion Attempts) 1- Appendix Exhibit 13 (QB Runs on 2-Point Conversions)

# An analysis revealed that the 2-point attempt pass/rush play call frequency and effectiveness vary given the pressure of the situation in the game

The disparity between pass and run play calls grows as the pressure mounts from low to high (pass frequency increases from 69% to 77%), but the effectiveness of passes decreases (51% to 43%) while the effectiveness of runs increases with pressure (41% to 62%)

Teams are adamant to place the ball in their quarterback's hands in crucial situations despite lower conversion

### Contents

### Overview

**2-Point Attempts** 

4<sup>th</sup> Down Attempts

Takeaways

# Analysis revealed a staggering difference in play calling tendencies and effectiveness on 4<sup>th</sup> and 1 vs. 4<sup>th</sup> and 2 situations

4<sup>th</sup> and Short Play Call Frequency and Conversion by Distance

1779  $4^{th}$  and 1 attempts & 541  $4^{th}$  and 2 attempts

On 4<sup>th</sup> and 1, 73% of attempts were **rushes**, converting 69% of the time (passes had a 55% conversion) On 4<sup>th</sup> and 2, **passes** accounted for 76% of play calls, converting 50% of the time (runs converted 59%) **Key Takeaway – 1 yard makes all the difference in play calling – but why?**

Only one team passed on the majority of their 4<sup>th</sup> and 1 attempts (Colts passed 51% of the time, and they had the worst conversion rate), indicating a league-wide preference to run the ball in this situation (76% of all attempts)

No teams ran the ball more than 50% of the time on  $4^{th}$  and 2

Teams can better prepare for these situations in the beginning of the season knowing the league-wide preference in play call

# Though the total number of 4<sup>th</sup> and 1 attempts showed no clear trend, there was a noticeable increase in attempts as a % of total opportunities in 2018

4<sup>th</sup> and 1 Attempts by Season

League-wide data (1779 attempts)

4<sup>th</sup> and 1 Attempts – Ratio Analysis

| 4 <sup>th</sup> and 1<br>Attempts | 2009-2017<br>(Average) | 2018   | 2018 %<br>Growth | FY     |
|-----------------------------------|------------------------|--------|------------------|--------|
| # of Attempts                     | 176.00                 | 195.00 | 10.80%           | 234.19 |

| Attempts per<br>Team              | 5.50                   | 6.09   | 10.80%           | 7.32   |

Total Opportunities = Total Number of  $4^{th}$  and 1 situations FY = Forward Year Estimate

A stark increase in the attempts per opportunity indicates more aggressive play calling and/or more critical situations on 4<sup>th</sup> and 1

If the 2018 rate were to stay constant, and if total opportunities returns to the average amount, it is fair to expect an increase of nearly 40 attempts in a given year

Key Takeaway - 4<sup>th</sup> and 1 situations will become increasingly important for defenses to prepare for, and teams will likely face 3.64 more attempts on average (1.82 offensively, 1.82 defensively) per 16 game season than in the previous 9 years Appendix Exhibit 11 (4th and 1 by Pressure and Field Position Over Time)

# A deeper dive revealed changes in willingness to attempt 4<sup>th</sup> and 1 opportunities given the pressure of the situation and the position on the field

Opp = Opponent's side of the field

Appendix Exhibit 7 (Pressure and Field Position Analysis)

Team's willingness to attempt a 4<sup>th</sup> and 1 has increased at almost all points on the field with the **biggest spike between the 40s** (intuitively, this makes sense, as this is too far to kick a field goal, and punts will net fewer yards when kicked from here)

When considering pressure, the largest % changes occurred in medium and low pressure situations (69% and 24% increase from average), indicating the increase in relative attempts is the result of more aggressive play calling and not due to a close game

Teams need to prepare to defend against 4<sup>th</sup> and 1, as it is becoming increasingly common to go for it, especially around mid field Appendix Exhibit 11 (4th and 1 by Pressure and Field Position Over Time)

# Like 2-point conversions, pressure is a large influencer on play call tendencies and conversion rate for 4<sup>th</sup> and 1 situations

Play calls greatly shift with pressure (80%-20% run/pass when low vs. 66%-34% run/pass when high) Pass conversion seems to be more influenced by pressure (62% to 50% for passes, 70% to 68% for runs) **Teams should be more confident in running the ball – especially in crucial situations** 

Patrick Walsh

Appendix Exhibit 5 (4<sup>th</sup> and 1 attempts)

# The ratio of pass to run plays has remained fairly steady over 10 years with a slight increase in the relative number of pass plays in recent years

4<sup>th</sup> and 1 Play Call Frequency by Season

4<sup>th</sup> and 1 Attempts – Conversion over time

| 4 <sup>th</sup> and 1<br>Attempts | 2009-2017<br>(Average) | 2018   | 2018 %<br>Growth |
|-----------------------------------|------------------------|--------|------------------|
| % Pass Attempts                   | 26.45%                 | 29.76% | 12.44%           |
| % Run Attempts                    | 73.55%                 | 70.24% | -4.48%           |
| Pass Conversion                   | 53.94%                 | 62.07% | 15.07%           |
| Run Conversion                    | 67.81%                 | 76.64% | 13.02%           |

In 2018, the split of runs to passes was 70%-30% indicating a shift towards passes relative to the 9 year average of 74%-26%

Interestingly, the conversion rate of each play type is at a 10-year high (77% for runs vs. 68% 10 year average, and 62% for passes vs. 54% 10 year average)

Teams are becoming more successful in 4<sup>th</sup> and 1 situations and should continue to increase aggression

# Total 4<sup>th</sup> and 2 attempts has been slowly rising since 2014, and there was a nontrivial increase in attempts as a % of total opportunities in 2018

4<sup>th</sup> and 2 Attempts by Season

League-wide data (541 attempts)

4<sup>th</sup> and 2 Attempts – Ratio Analysis

| 4 <sup>th</sup> and 2<br>Attempts | 2009-2017<br>(Average) | 2018   | 2018 %<br>Growth | FY     |
|-----------------------------------|------------------------|--------|------------------|--------|
| # of Attempts                     | 53.22                  | 62.00  | 16.49%           | 79.22  |
| Total<br>Opportunities            | 299.00                 | 234.00 | -21.74%          | 420.33 |
| Attempts per<br>Opportunity       | 17.80%                 | 26.50% | 48.85%           | 26.50% |
| Attempts per<br>Team              | 1.66                   | 1.94   | 16.49%           | 2.48   |

Total Opportunities = Total Number of  $4^{th}$  and 2 situations FY = Forward Year Estimate

Despite 22% fewer 4<sup>th</sup> and 2 opportunities, the total attempts rose 16% and attempts per opportunity rose nearly 49%, signaling more aggressive play calling and/or more critical situations when a team faced 4<sup>th</sup> and 2

If the 2018 rate stays constant, and if total opportunities returns to average, it is fair to expect an increase of 17 attempts in a given year

Key Takeaway - 4<sup>th</sup> and 2 situations are attempted more frequently now, and teams will likely face this situation on average 4.96 times a year (half offensively, half defensively), 49% more frequently than the 9 year average of 3.33 times a year Appendix Exhibit 12 (4th and 2 by Pressure and Field Position Over Time)

PATRICK WALSH

# A deeper dive revealed changes in willingness to attempt 4<sup>th</sup> and 2 opportunities given the pressure of the situation and the position on the field

Opp = Opponent's side of the field

Team's willingness to attempt a 4<sup>th</sup> and 2 has increased at all points on the field, and on the aggregate, in all situations in the game

When considering pressure, the largest % changes occurred in high and medium pressure situations (73% and 47% increase from 9 year average), indicating the increase in relative attempts is the result of more aggressive play calling in crunch time

#### Defenses should take note as coaches are showing more confidence on 4<sup>th</sup> and 2, especially In higher stakes situations

# Pressure creates the largest disparity in play type frequency but has less influence on the conversion of play types in 4<sup>th</sup> and 2 situations

4<sup>th</sup> and 2 Play Call Frequency and Conversion by Pressure

Passes are overwhelmingly preferred with increased pressure (66%-34% pass/run split when low vs. 82%-18% when high)

Though runs become less effective with pressure on 4<sup>th</sup> and 2, **pass conversion seems to not be greatly influenced**, and the relationship is less clear (51% to 50% pass conversion when pressure is low vs. high, and 68% to 57% run conversion)

Teams are leaning heavily on passing the ball (perhaps too much, and telegraphing their decision in high pressure situations), yet runs are still a very viable and underutilized option in this situation and should be used more often Appendix Exhibit 6 (4th and 2 Attempts)

# While difficult to identify a clear trend over the past 10 years, passes have accounted for <sup>3</sup>/<sub>4</sub> of all attempts over the past 10 years on 4<sup>th</sup> and 2

4<sup>th</sup> and 2 Play Call Frequency by Season

4<sup>th</sup> and 2 Attempts – Conversion over time

| 4 <sup>th</sup> and 2<br>Attempts | 2009-2017<br>(Average) | 2018   | 2018 %<br>Growth |
|-----------------------------------|------------------------|--------|------------------|
| % Pass Attempts                   | 76.78%                 | 73.77% | -5.53%           |
| % Run Attempts                    | 23.28%                 | 26.23% | 18.32%           |
| Pass Conversion                   | 49.18%                 | 60.00% | 21.99%           |
| Run Conversion                    | 57.66%                 | 64.71% | 12.22%           |

In 2018, the split of passes to runs was 74%-26% with a 9 year average of 77%-23% (fairly steady)

The effectiveness of both runs and passes has risen substantially above their 10 year averages (60% conversion for passes in 2018 vs 49% average, and 65% for runs vs. 58% average)

Teams are becoming more successful in 4<sup>th</sup> and 2 situations and should look to be more aggressive

### Contents

### Overview

## 2-Point Attempts

### 4<sup>th</sup> Down Attempts

Takeaways

## Offensive coaches should alter their approach to short yardage situations

## Defensive coaches should leverage data to prepare for short yardage situations

#### 2-Point & 4<sup>th</sup> and short attempts will become increasingly important

Attempts have skyrocketed recently on a % basis and totals will rise in the future, so this play should be a bigger part in game plans

Identify opposing team's tendencies

These are not coin-flip scenarios, data suggests the offensive team will heavily favor a play call in these situations

#### Reconsider personnel and schematic approach for these situations

An optimal roster can be built to defend in these situations, and defensive alignment and play calling can be enhanced for these scenarios (more data can be useful here – i.e "4-man front, B-gap blitz, other schemes that prove effective against these plays)

### **Potential Next Steps**

- The procedure and findings serve to guide further analysis to reveal additional insight (either league-wide or team-specific)
- Analysis such as player utilization, route distance, preferred side to target with the ball (right/left/middle) can all be performed (both in and outside of these short yardage situations)
- Happy to follow up with more information

Highlighted above are 2 plays, one of which was determined to be a QB scramble that was wrongly classified as a run play, which was later converted to a pass, and the other a designed QB run (correctly called a run)

Many of the designed runs were QB draws, zone reads, or jumbo formations used on the goal line

There were roughly 20 plays with no video found, in which case, the original classification was kept

So What? The pass total could be higher than indicated, closer to 80% rather than 75% on 2-point conversions
