Subject: Kdaj je Janševa vlada začela genocid Slovencev?

To:

**Odgovor: 3. aprila 2020.**

**Pojasnilo #1**

725. Odlok o omejitvi predpisovanja in izdaje zdravil z učinkovino klorokin, hidroksiklorokin ali azitromicin

<https://www.uradni-list.si/glasilo-uradni-list-rs/vsebina/2020-01-0725/odlok-o-omejitvi-predpisovanja-in-izdaje-zdravil-z-ucinkovino-klorokin-hidroksiklorokin-ali-azitromicin>

Zelo zelo zelo podrobno preberite omejitve v prvem členu, ki so onemogočile pravočasno in edino pravilno ambulantno zdravljenje Covida

**Pojasnilo #2**

Hydroxychloroquine / azithromycin in COVID-19: The association between time to treatment and case fatality rate

<https://sciedirect.com/science/article/pii/S1477893921002040>

**"No patient treated within the first 72 h of illness died." in "Conclusions: The case fatality rate in COVID-19 outpatients treated with hydroxychloroquine/azithromycin was associated with the number of days of illness on which treatment was started."**

**Pojasnilo #3**

Vse zapisano pod točko 2 se je vedelo že konec marca 2020, ko je Vladimir Zelenko poslal javno pismo Trumpu in vsej medicini planeta.

<http://drelef.org/zelenko/Vladimir-Zelenko-treatment.pdf>

Kar nisem pojasnil zgoraj, sem že pred dvema letoma spodaj. c/p

lp, Tomaž

-----

Kratek povzetek kronologije genocida.

**2005:** Chloroquine is a potent inhibitor of SARS coronavirus infection and spread

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1232869/>

**2010:** Zn(2+) inhibits coronavirus and arterivirus RNA polymerase activity in vitro and zinc ionophores block the replication of these viruses in cell culture

<https://pubmed.ncbi.nlm.nih.gov/21079686/>

**2014:** Chloroquine is a zinc ionophore

<https://pubmed.ncbi.nlm.nih.gov/25271834/>

**Začetek 2020:** Didier Raoult, največji strokovnjak za tropske bolezni v Franciji, začne uspešno zdraviti zgodaj s hidroklorokinom in azitromicinom, Zelenko izve za njegovo delo in slučajno naleti na članek iz 2010 zgoraj, zato doda v protokol še cink.

**23. marec 2020:** Zelenko celemu svetu napiše to javno pismo! Temeljito ga preberite! **Protokol ima tri komponente in terja čim zgodnejše zdravljenje!**  
<http://drelef.org/zelenko/Vladimir-Zelenko-treatment.pdf>

**Zganejo se zle sile, pojasnilo v videu! Blokirajo uporabo HCQ v zgodnjem in edinem pravilnem zdravljenju.**  
<https://www.bitchute.com/video/WHlkyjGEPcF/>

**28. aprila 2020:** Zelenko ponovno piše celemu svetu!  
<http://drelef.org/zelenko/Zelenko-memo-April.pdf>

(vsi viri o Zelenku: <http://drelef.org/zelenko/index.html> )

Ko so zablokirali HCQ, Zelenko najde ta članek iz 2014, zato kot nadomestilo za HCQ doda kvercetin in EGCG. Zinc ionophore activity of quercetin and epigallocatechin-gallate: from Hepa 1-6 cells to a liposome model  
<https://pubmed.ncbi.nlm.nih.gov/25050823/>

Kvercetin in EGCG žal nista tako močna cinkova ionofora, v tej funkciji imata in vitro le 20% in 40% učinek hidroklorokina. Tudi objavljeno, a ne najdem zdaj.

**4. avgust 2020:** In vitro screening of a FDA approved chemical library reveals potential inhibitors of SARS-CoV-2 replication  
<https://www.nature.com/articles/s41598-020-70143-6>

Ciitiram: "Among the 15 hits for which EC50 values were determined (Table 2, Fig. 2), two of the highest antiviral activity were obtained for Azithromycine (EC50 = 2.12  $\mu$ M) and Hydroxychloroquine (EC50 = 4.17  $\mu$ M) that were selected for clinical trials<sup>18</sup>. For these two compounds, the dose response curves have at least two values above EC90, which demonstrates a clear in vitro activity as already described for Hydroxychloroquine. EC90 of Azithromycine is 8.65  $\mu$ M and the one of Hydroxychloroquine is 25.49  $\mu$ M, these values reflect that the concentration of Hydroxychloroquine has to be significantly higher than Azithromycin to totally block the viral replication."

**Published online 2020 Oct 26:** COVID-19 outpatients: early risk-stratified treatment with zinc plus low-dose hydroxychloroquine and azithromycin: a retrospective case series study  
<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7587171/>

**19. november 2020:** Dr. Zelenko's statement to the U.S. Senate Committee on Homeland Security  
<http://drelef.org/zelenko/Zelenko-statement-to-Senate-hearing.pdf>

Citiram s strani 6: **"I have treated over 3,000 COVID-19 and suspected COVID-19 patients in a unique orthodox Jewish setting in New York. Additionally, I have consulted physicians who have treated over 10,000 patients in total. 100% of my patients that are high risk have fully recovered if they received the triple combination therapy of Hydroxychloroquine + Zinc + Antibiotic (Azithromycin or Doxycycline) within the first 4 days of symptoms, and take it for at least 5 days. This triple combination therapy administered immediately in the outpatient setting has gained international acclaim and has become known as the Zelenko Protocol. High risk patients that have been cured include the elderly including Holocaust survivors that are over 90 years old, cancer patients, diabetics, etc. This group should have a fatality rate between 5% - 20%. The fatality rate of these patients that follow the Zelenko Protocol in the first four (4) days of symptoms is 0.00%."**

**Published online 2020 Nov 28:** Hydroxychloroquine lung pharmacokinetics in critically ill patients with COVID-19  
<https://pubmed.ncbi.nlm.nih.gov/33259916/>

Citiram: "The median ratio of ELF/plasma concentrations was 40.0 (7.3–162.7) and 21.2 (18.4–109.5) for 400 mg × 1/day and 200 mg × 3/day, respectively. ELF exposure is likely to be underestimated from HCQ concentrations in plasma. In clinical practice, low plasma concentrations should not induce an increase in drug dosage because lung exposure may already be high."

**Sklep: v Zelenkovem protokolu imamo dve močni antivirusni zdravili, eno od obeh, HCQ, je istočasno zelo močan cinkov ionofor. Farmakokinetika HCQ pa je takšna, da dosega visoke koncentracije ravno v pljučih. Z Zelenkovim protokolom bi lahko za 10-20€ na pacienta pozdravili VSE!**

**NOBENA OD ODMEVNIH ŠTUDIJ, KI JE JAVNO POKOPALA  
HIDROSIKLOROKIN, NI PONOVILO NJEGOVEGA PROTOKOLA!**

Tu imate kompletno zgodbo, ki je bila objavljena že decembra 2020. Zelo dolga in temeljita analiza!  
<https://filiperafaeli.substack.com/p/yes-hydroxychloroquine-is-scientificallly?s=r>

Točno 15.12.2020 sem Boštjanu M. Zupančiču in še trem prejemnikom napovedal naslednje: "Enako kot s HCQ se zdaj dogaja tudi z ivermektinom ... Vse to ima le en namen, na silo in pod pretvezo urgentnosti pocepiti z novimi (nova, dolgoročno nepreizkušena metoda imunizacije) cepivi ves Zahod. Le Zahod. Ostali svet jih ne rabi, ker ne živi v psihozi umetno in načrtno ustvarjene krize. Oni nimajo krize, ker svoje ljudi zgodaj zdravijo s HCQ in ivermektin protokoli zgodnjega zdravljenja."

Za piko na i: [hcqmeta.com](http://hcqmeta.com)

Sapienti sat!
