

Inkjet Printers Versus Laser Printers

When choosing between laser printers or inkjet printers, the choice may not be as easy as you think. Keep in mind that your new [multifunction printer](#) will need to handle a mixture of multiple employees and a large workload. Take a look at the comparison between laser printers versus inkjet printers to assist in your decision process. Maybe you need a simpler printer, maybe you need a [commercial copier](#). Read on to choose your best [office copier](#) or home printer.

Advantages of Laser Printers

- Speed: A laser printer can turn out pages more quickly than an inkjet printer can.
- Low cost: Over time, toner costs for a laser printer total far less per page than refilling and replacing inkjet printer cartridges.
- Quiet operation: A laser printer is generally quieter than a low-cost inkjet printer.
- Best-quality text: No inkjet printer will ever turn out black text and line graphics as crisply as a laser printer does.

Advantages of Inkjet Printers

- Versatility: A color inkjet can print on many types of media, including craft paper, T-shirt transfers, and even printable CD/DVD discs.
- Smaller size: Save some space on your desktop.
- Larger paper sizes: If you spend more, you can add to your system a large-format inkjet printer that can print 11-x-17-inch or larger items.

So, there you go.
