Dianabol 50 containing the active ingredient Methandrostanolone (50 mg) is considered an androgen and anabolic steroid medication. This anabolic steroid has a much greater fame under the slang name as "Dbol". Molecularly, it is very similar to testosterone, but it has a less pronounced androgenic activity and a higher anabolic index. Experienced bodybuilders are known to take 50 to 100mg of Dbol daily during the steroid cycle. Dianabol has a half-life of 3-5 hours, which is why experts recommend dividing your intake into 2 to 3 small doses per day to maintain optimal blood levels. Take Dbol 45 minutes before your workout - it works best as a pre-workout supplement. [discover more](#)
