Recover Deleted MS Excel File, When not in Recycle Bin: – Office.com/setup

Method 1: Retrieve unsaved Excel File or Workbook:

MS Excel has inbuilt file recovery tools through which you can recover Excel data.

1: Auto Recover File Location:

For this, you have to open your Excel workbook and then click on File tab. Then you should select the Options which are at the bottom. In the next Window, you have to click on the Save option. Now, there is a Auto Recover file location. And it has the path of your auto saved document. You just have to copy this path. After this, open your File Explorer and paste the path and hit enter key. Here you will see the last save of your document and it starts with the name “MYDOC.” Just click on it to open the file. You have to right-click on the Microsoft Excel Binary file and then select Open option. At the end, select Excel and click on Ok button.

2: Recover From Recent File Option:

First, open your Excel file and click on “File” option. Now from the File menu, you have to choose the Open. In the opened Window, you will see the option “Recover Unsaved Workbooks” and just click on it. Here you have to Search for the Excel file which you need to recover. When you get it, just click on save option. This helps to retrieve your Excel workbook. [#Office.Com/Myaccount](#)

Method 2: Retrieve The Deleted Excel File That Has Been Saved:

1: Try Automatic Solution For Deleted Excel File Recovery:

If you want to recover deleted Excel file which you do not found in Recycle Bin then you should use the Excel Recovery tool. This tool helps to recover corrupt/deleted Excel files in few minutes and this tool also helps in fixing Excel error. Through this, you can recover your deleted chart sheet, table, cell comment, image, cell comment, formula etc.

2: Restoring Files From Backup:

For this, first you should go to your system Control Panel and then select Backup and Restore option. After this, click on Restore my files option and follow the instructions in the wizard.

3: Restoring Excel Files From Previous Version:

For this, first you have to go to the folder, which contains your deleted Excel file. You have to right click on it and just click on ‘Restore previous versions’. You will see the list file version and you have to choose Excel version from that list.

This method helps to [recover your files when it is not in Recycle bin](#). But if you want more information then just visits to the site of MS Office via www.office.com/setup.
