

You Can Now Play With Minecraft's Allay Mob

The latest Minecraft snapshot is now available and it's a great one. Each snapshot showcases new mobs, features as well as building types, and whatever else the developers feel like. It's a great way to test how the upcoming updates affect the game without disrupting players too much. The 22w13a snapshot also includes the adorable Minecraft allay mob.

The allay is a brand new creature and a kind of cute blue Sprite. They're not just friendly, they're useful too. You can give them things and they will help you find the item in the area. Although they are an oddity, we think they will quickly become one of the most popular mobs on the internet.

You can appreciate the potential they have as partners by observing how stunning they appear while holding a book. However, you can also see other uses by looking at how they behave in the dark. We will see more people using them and their unique traits in the near future.

The humble Allay isn't the only new feature in this Minecraft snapshot, however. 22w13a also introduces the re-introduction of ancient cities. These are structures that are located in the Deep Dark that you can explore to discover their secrets. Alongside the brand new Swift Sneaking enchantment which you can find in specific chests, you'll also find an entirely new block called Reinforced Deepslate.

There are several bugs fixed, such as the location of chest locks inside chest boats. Additionally, there are some things that frogs are known for. There are also a handful of game event changes which are being renamed in order to ensure they are "grammatically consistent." If you enjoy getting into the nitty-gritty of these updates, then you'll be happy to know that you can do it by reading the official announcement [here](#).

If you're interested in playing the Minecraft Allay, this post will also provide instructions on how to install the snapshot. Keep in mind that doing so can corrupt your world, so make sure you use safe save protocol when doing so. It's important to back the world up.
