

Don't Let Bladder Sling Complications Come Between Your Happiness

A bladder sling is used to treat stress urinary inconsistency in women. It is made of strips of surgical mesh which is inserted through one vaginal incision and two abdominal incisions.

SUI primary occurs in women due to the loosening of the muscles of urethra due to pregnancy, childbirth, and ageing. Due to SUI, women go through involuntary loss of urine while doing regular physical activities like sneezing and coughing.

To treat these complications doctors recommended many women to go through [bladder sling implant](#). But after the implantation, women started feeling certain physical and mental problems which added to their previous complications instead of curing them.

Some of the [bladder sling complications](#) are the following:

- Erosion of the soft internal tissues of the vagina
- Organ perforation that is penetration of the wall of an organ in the body.
- Nerve damage
- Fistulas
- Bruising
- Vaginal shrinkage and shortening
- Blood in the stool and urine
- Infection in the urinary tract
- Autoimmune problems
- Vaginal bleeding
- Degrading of the mesh
- Vaginal scarring
- Painful sexual intercourse
- Recurrence of prolapse or inconsistency
- Severe pelvic, genital, or groining pain.
