Quality Assurance Management System

Quality is a result of several processes done right. Quality Control and Quality Assurance at every stage and every step of the process becomes imperative. But with so many processes happening in your lab, you need a tool that will do the multi-tasking, the tracking and the managing for you and at the same time ensure absolute quality in your product.

We have exactly what your lab needs! **Caliber QAMS** – the robust compliance tool to manage your entire QA and QC process. To build a solid quality standard of your process, Caliber has designed and developed the Quality Assurance Management System, providing you with a holistic and scalable solution. It is a cohesive quality management system that can be integrated with applications like ERP, QAMS, training management system and document management system.

With **Caliber QAMS** every quality manager will be able to monitor any quality incidents in real-time. With integrated dashboards and graphical view capabilities of the process, everything – pending tasks, completed tasks, personnel involved, time frames – is track-able.

Caliber QAMS is a solution with highly configurable, workflow-driven process automation which is 21CFR Part 11 and cGMP compliant. **Caliber QAMS** helps you in creation, review and approval of change request, deviation recording, automating the entire QA process. This results in easy planning, scheduling and executing self-inspections, vendor audits and regulatory audits. Through an integrated approach, **Caliber QAMS** facilitates task management of follow-up actions through CAPA and training. It reduces training needs and process changes through a unique process of addressing configuration needs.
