

Table 1

|  | Evidence                                     | Concealment Category                    | Concealment Method(s)   | Ease of total destruction/concealment?  | Notes  | Success of effort to destroy/conceal |
|--|--|---|---|---|--|--------------------------------------|
|  | Rav 4 Key                                    | Concealment short term                  | Hidden in bedroom cabinet   | Total destruction of the metal part of key would be difficult. Disposal (off site) would be easy. | Total destruction of dna (burning, cleaning) would be easy.  |                                      |
|  | Rav4 vehicle                                 | Concealment (very) short term           | Moved to far end of property. Covered in debris.                        | Total destruction would be difficult. Moving it off site would be easy.                           | Odd attempt at very superficial concealment which seemed very naive.   |                                      |
|  | Body   | Partial Destruction                     | Burning   | Total destruction difficult. There were opportunities for concealment (burying, dumping).         | There was obviously a sustained effort(commitment), possibly reburning, to achieve the level of destruction.                           |                                      |
|  | Bones  | No concealment                          | Possible moving of remains for further burning and/or diving of remains | Total destruction difficult. Concealment would have been easy.                                    | The separation of some remains between the fire pit and burn barrel could indicate some attempt at concealment or further destruction. |                                      |
|  | Bullets in garage                            | No concealment                          | Left on floor   |   |  |                                      |
|  | Rav4 license plates                          | Concealment short-term                  | Folded and placed in vehicle nearby                                     | Disposal off site would have been easy for total concealment                                      |  |                                      |
|  | Teresa's phone, pda, camera                  | Destruction partial                     | Burned  | Material type (metal, glass) type made total difficult.   |  |                                      |
|  | Components left behind from phone/pda/camera | No concealment                          | Left in burn barrel at top of ashes                                     | Long term concealment (dumped off site) would be east.  |  |                                      |
|  | Teresa's keys                                | Concealment long term/total destruction | Not found   | Total destruction difficult.  | * if these items were found at home we would expect the initial investigation to have focused on abduction or suicide.                 |                                      |
|  | Teresa's wallet/handbag                      | Concealment long term/total destruction | Not found   | Total destruction via burning possible, depending on materials.                                   | As above. Also it is hard to transport camera, pda and phone without a bag.  |                                      |
|  | Teresa's blood in rav4                       | No concealment/cleaning/destruction     | Appears uncleaned, undamaged and in original condition                  | Total destruction possible.   | If we believe Avery totally destroyed blood/dna in garage then we would have to accept he had the ability to do so here.               |                                      |
|  | Avery's blood in rav4                        | No concealment/cleaning/destruction     | Appears to be in original conditon                                      | Total destruction possible.   | (As above)   |                                      |
|  | Teresa's CF memory card in rav4              | No concealment or destruction           | Appears to be in original conditon                                      | Total destruction or concealment would be easy  | Why was this not burned with other techology?  |                                      |

|  | Evidence  | Concealment Category  | Concealment Method(s)  | Ease of total destruction/concealment?  | Notes   | Success of effort to destroy/conceal |
|--|---|---|--|---|---|--------------------------------------|
|  | Teresa's logsheet/<br>Schmitz cheque/<br>Avery payment              | Total concealment,<br>assuming total<br>destruction   | Assuming burned  | Material type<br>(paper) made total<br>destruction easy   |   |                                      |
|  | Teresa's blood/dna/<br>hair in trailer                              | Not present/no<br>indication of<br>concealment  | There was no<br>indication of clean<br>up. Assuming she<br>was never there.  | Total destruction<br>possible but no<br>indication of<br>cleaning necessary<br>to do so.  |   |                                      |
|  | Teresa's blood<br>spatter   | Not present/no<br>indication of<br>concealment  | No signs of spatter<br>clean up  | Total destruction<br>possible but no<br>indication of<br>cleaning necessary<br>to do so.  |   |                                      |
|  | Teresa's blood pool   | **only applicable if<br>you believe blood is<br>what Avery was<br>cleaning**<br>Cleaning - Total<br>destruction | Cleaning (no<br>credible proof of<br>what substance<br>was on that area<br>but it produced a<br>low luminol<br>reaction) |   | What was being<br>cleaned and what<br>was used to clean<br>it, unknown.   |                                      |
|  | Teresa's Dna/hair<br>on garage building<br>or items stored<br>there | Not present/no<br>indication of<br>concealment  |  | Total destruction<br>possible but no<br>indication of<br>cleaning necessary<br>to do so.  |   |                                      |
|  | Phone calls   | Concealment short-<br>term  | *67 withholding<br>number  | The calls directly to<br>Teresa could have<br>been masked using<br>business phone or<br>alternate sim card  |   |                                      |
|  | Digital evidence<br>(photos or info<br>stored on<br>electronics)    | Total destruction   | Burning  | Burning was likely<br>to cause total<br>destruction to<br>internal memory<br>and external<br>memory such as<br>sim card in these<br>devices.  | We do not know<br>what data was<br>recovered off the<br>memory card in the<br>cargo area.   |                                      |
| <b>Prepared by u/<br/>bugdog1 any<br/>errors or<br/>amendments<br/>needed please let<br/>me know</b> | Blood/Dna<br>Evidence on Gun  | Total destruction.<br>Or was never<br>present.  | Cleaning would be<br>the method if it<br>occurred.   | Unsure how difficult<br>it is to completely<br>remove blood<br>spatter. Skull<br>injuries suggest<br>close range<br>shooting so that<br>could make<br>cleaning to total<br>destruction more<br>difficult. | I don't feel the<br>bullets are credible<br>so the link to the<br>gun may also lack<br>credibility and<br>explain lack of<br>forensics. | ???                                  |
|  |   |   |  |   |   |                                      |
|  |   |   |  |   |   |                                      |
