Question No. 1

Which of the following statements are applicable to the technology of massive MIMO?

(Select 3)

- **A.** Several data flows are sent at the same time on the same frequency.
- **B.** The signals on each antenna are made orthogonal.
- **C.** The data flows are sent at the same time on different frequencies.
- **D.** Transmit diversity is used in case of poor radio conditions.

Answer: A, B, D

Question No. 2

What is the ''sweet spot'' for Industry 4.0?

- **A.** The ''sweet spot'' for industry 4.0 is the intersection of URLLC, eMBB and mMTC.
- **B.** The ''sweet spot'' for industry 4.0 is a double-digit revenue growth.
- **C.** The ''sweet spot'' for industry 4.0 is a deployment strategy for delivering the required capacity and coverage for industrials.
- **D.** The ''sweet spot'' for industry 4.0 is the intersection of operational, information and communications technologies.

Answer: D

Question No. 3

You are working in a logistics company. Your manager is telling you that automation is very important to create more opportunities for the company. His idea is to deliver parcels using drones. With this in mind, he asks you if a 4G network provides good connectivity for controlling the delivery drones. How would you answer him and why?

- **A.** Yes, 4G provides a connectivity network but, it is quite expensive. WIFI may be a preferable option.
- **B.** No, a 4G network is not a good choice for drone control because big operators (with whom we cannot deal) mainly deliver it.
- **C.** No, a 4G network cannot deliver the required connectivity. It is not able to guarantee the latency and reliability required for drone control.
- **D.** Yes, the drone control application can be hosted in the cloud and the 4G network can provide the speed needed to reach the application and control the drones.

Answer: D

Question No. 4

What functionality is applied by SDN to find an alternative path in case of failure in the Transport Network?

- **A.** Path Correlation Engine
- **B.** Alternative Route Finding
- **C.** Alternative Path Computing
- **D.** Path Computation Engine

Answer: C

Question No. 5

Which of the following drive 5G low latency? (Choose two.)

- **A.** Support of up to 1 billion of IoT and sensors devices per km2
- **B.** Lower Time Transmission Interval (TTI)
- **C.** Higher spectral efficiency
- **D.** Edge Clouds

Answer: B, C
