About Me

I am a Computer Science student with a strong analytical background, proficient in several programming languages and technologies, focusing mainly on Data Science and Machine Learning.

Education

Computer Science and Engineering / [REDACTED] University of Science and Technology [REDACTED]

Since April 2016

Current CGPA: [REDACTED]

Higher Secondary Certificate / [REDACTED]

From 2013 to 2015

GPA: 5.00

Secondary School Certificate / [REDACTED]

From 2009 to 2013

GPA: 5.00

Skills

Database

SQL/PLSQL

**Data Structure and Algorithm**

Object Oriented Programming

Python, C++, C#, Java

Data Analysis

BeautifulSoup, Pandas, Numpy, Matplotlib and Seaborn

Machine Learning

Regression and Classification using sci-kit learn

Languages

Bengali/Bangla

English

Assets

Leadership

Empathy

Authenticity

Interests

Computer Vision

Deep Learning

Internet of Things

Creative Writing

Cinematic Art

in [REDACTED]

🐙 [REDACTED]

f [REDACTED]

Competitive Programming

LeetCode ██████████

HackerRank ████████

Codewars ████████

Additional Remarks

I've done some mini-projects that only scratch the surface of many high-level programming areas. However, there were times I went beyond just the basics and was able to incorporate some features that required a good amount of coding as well as reimagining the overall objective. On top of that, I had to work with all kinds of different people in order to achieve a common goal. All of my work can be found on my Github page. I am also doing my undergraduate thesis on Generative Adversarial Network which requires a good understanding of Neural Networks and Deep Learning. During these years, I believe I have managed to build a strong relationship with the whole idea of Developing and Deploying software-based applications.
