Minecraft Enchantments List: how to Create and Utilize An Enchanting Table

Enchantments are extremely beneficial for anyone who is a Minecraft player. They can provide a variety of effects, such as an increase in the amount of resources you can gather, or increased power to defeat powerful enemies like the Wither and the Warden. In Minecraft 1.19 the new Swift Sneak enchantment will also allow you to move faster when sneaking and is essential for those who want to explore the Deep Dark without triggering the Warden.

You've come to right site if you're looking for a way to discover the world of Enchantments or simply want to know how to create an Enchanting Table.

How to create an Enchanting Table

To make an Enchanting Table, you have to combine 4 Obsidian, 2 Diamonds, and a Book in a Crafting Table, with the following arrangement:

Wherever you put your Enchanting Table in your base or house, you should surround it with Bookshelf blocks (each with a tile of air between it and the Enchanting Table). Each Bookshelf block within a range will increase the maximum level of enchantability by +2. Therefore, you'll need 15 bookshelves arranged around your Enchanting Table to get to the maximum level of enchantment of 30.

How does Enchanting work in Minecraft?
A1CDN

To enhance an item you need to right-click an Enchanting Table and then place the item in the first slot. Three options for enchantments will be displayed for you to select.

Place 3 to 4 Lapis Lazuli in the second slot to unlock the different available enchantments (top enchantment requires 1 Lapis, middle requires 2, bottom requires 3).

Hover over each enchantment to find the type of enchantment and level. Then , click on the desired enchantment to apply it to your item. That's all there is to the process!

This is a flat lie. There's more to charm than meets the eye. You can increase the chances of obtaining high-level enchantments simply by setting up your Enchanting table with bookshelves. The most powerful enchantments are unlocked with having a minimum of 30 XP.

It is also worth noting that the kind of item you are enchanting can determine the possibility of more powerful spells appearing. Gold is the most "enchantable" material, followed by Netherite (for Armor), Leather and Chain (for weapons and instruments), and Wood and Iron (for weapons and other tools).

An item can be enchanted with multiple enchantments, provided they don't conflict with each other (see the table of enchantments below). A piece of equipment cannot be equipped with two different types of enchantments. However, many enchantment types offer different levels of power. Sharpness, for example has five levels. Sharpness V (5) offers the greatest damage potential.

Minecraft List of Enchantments

Anasterisks indicate that an Enchanted Book must be used to apply the enchantment to the item. They cannot be granted the enchantment directly from the Enchanting Table.

Enchantments, along with Potions are among the very best endgame benefits that you can give yourself when you are preparing to take on powerful mobs or other players on PvP Minecraft servers.
