

Jewellery Cleaning

Jewellery cleaning is essentially the process of removing tarnish or dirt from jewellery to enhance its look. Whilst many people use cleaning products on a daily basis, these can actually result in damage to your jewellery so the best option is to clean it on a regular basis using professional equipment. There are a number of methods used when it comes to [Jewellery Cleaning](#) and there are also a few different types of restoration. Whether you are looking to clean a new piece of jewellery or something that has worn away, there will be a method out there to suit you.

Jewellery Cleaning

Some of the most basic jewellery cleaning methods include using a damp cloth, such as a baby wipe or a microfiber cloth, to remove dust and dirt. If you are looking for a more thorough clean then ultrasonic cleaner models are available. These use a high frequency vibration to remove dirt and stains from your jewellery. Using ultrasonic cleaners is particularly beneficial if you have an antique piece of jewellery. This will help to restore its value and it will also help to prevent the colour of the gemstones from fading. You may find that using an ultrasonic cleaner is a better solution than using a wet cloth, as these devices can clean your jewellery much more thoroughly.

Jewellery Cleaning

Another type of jewellery cleaning method is known as air diffuser. Using this method, you will blow a specialised bulb over the jewellery, which will help to fill the gaps between the gems. This can help to restore the shine to jewellery and it can help to get rid of any dirt or silver marks that have formed over time.

Jewellery Cleaning

Some people like to use an ultrasonic cleaner in combination with a liquid cleaner. These can be purchased from specialist [*Jewellery Cleaning*](#) retailers and are fairly inexpensive. The ultrasonic cleaner uses sound waves to help remove dirt and debris from your jewellery, while the liquid product works to remove tarnish or soil from the surface. Both products will work together to provide a great overall solution for your jewellery cleaning needs.

Jewellery Cleaning

Some people like to purchase their own jewellery polishing cloths. These can be purchased from most good jewellery retailers, as well as from specialist online stores. Some of the cheaper ones aren't worth using altogether, as they tend to only remove the surface layer of tarnish and dirt. However, if you use a quality product you can often achieve the results you want from a sterling silver [Jewellery Cleaning](#) cloth and polish at the same time.

Jewellery Cleaning

If you want to clean your jewellery with a professional ultrasonic cleaner, you can find these being used around the world. You should take care to ensure that you purchase one that is high quality and has been specifically designed to clean ultra-fine jewellery. This is because even though these cleaners are fairly low powered when compared with more powerful machines, they can still damage your precious metal if you aren't careful.

Jewellery Cleaning

Also, ultrasonic cleaner machines need to be kept as clean and dry as possible in order to avoid any damage to the internal components. Silver and sterling silver jewellery is a delicate beauty that can be damaged by careless handling, so be careful how you treat it!
