

DSARMS A58 Metric FAL 20Rd Metric Polymer Magazines

Special Note: Due to the wide variety of FAL rifle and upper receivers that have been produced over the years it may be necessary to perform some minor fitting of the polymer magazines to your rifle.

If your new polymer magazine is struggling to lock into your magazine catch on your metric FAL rifle try flattening out the lower lip of the rear catch. This should be simple enough to do with sandpaper, a small file or even a box cutter.

If your magazine is still not locking in securely try removing some excess material from the outside of the catch. Take off just a little at a time and keep trying the fit as you go along.
